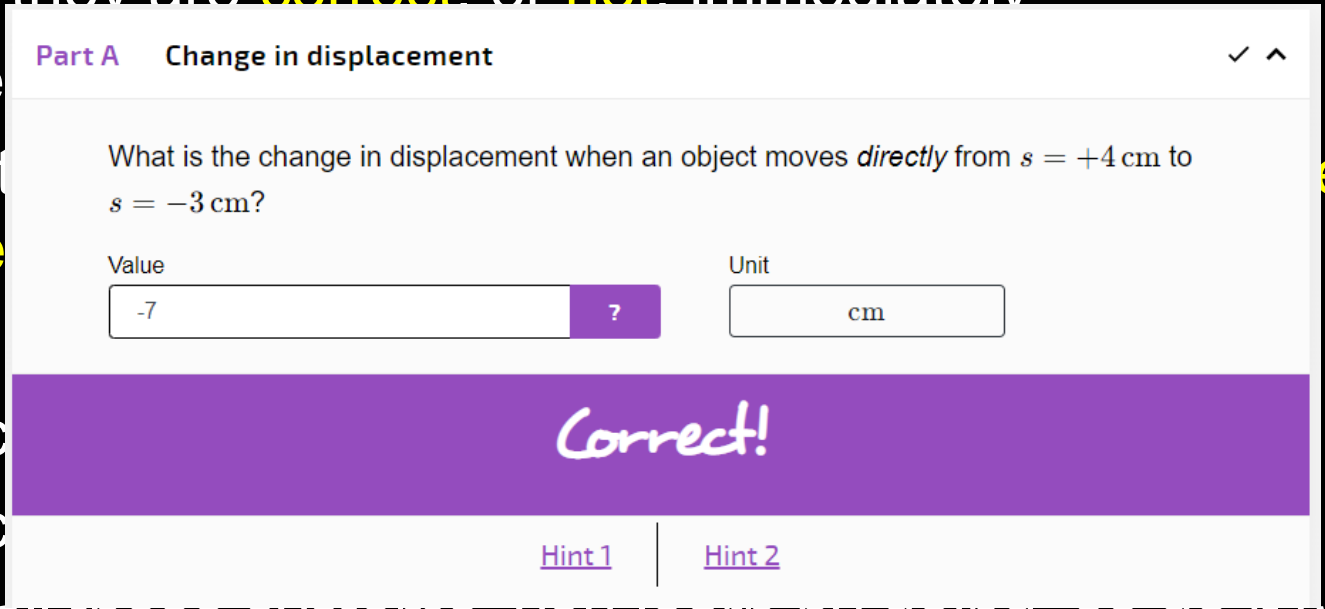
‘Tests’ in Isaac Science

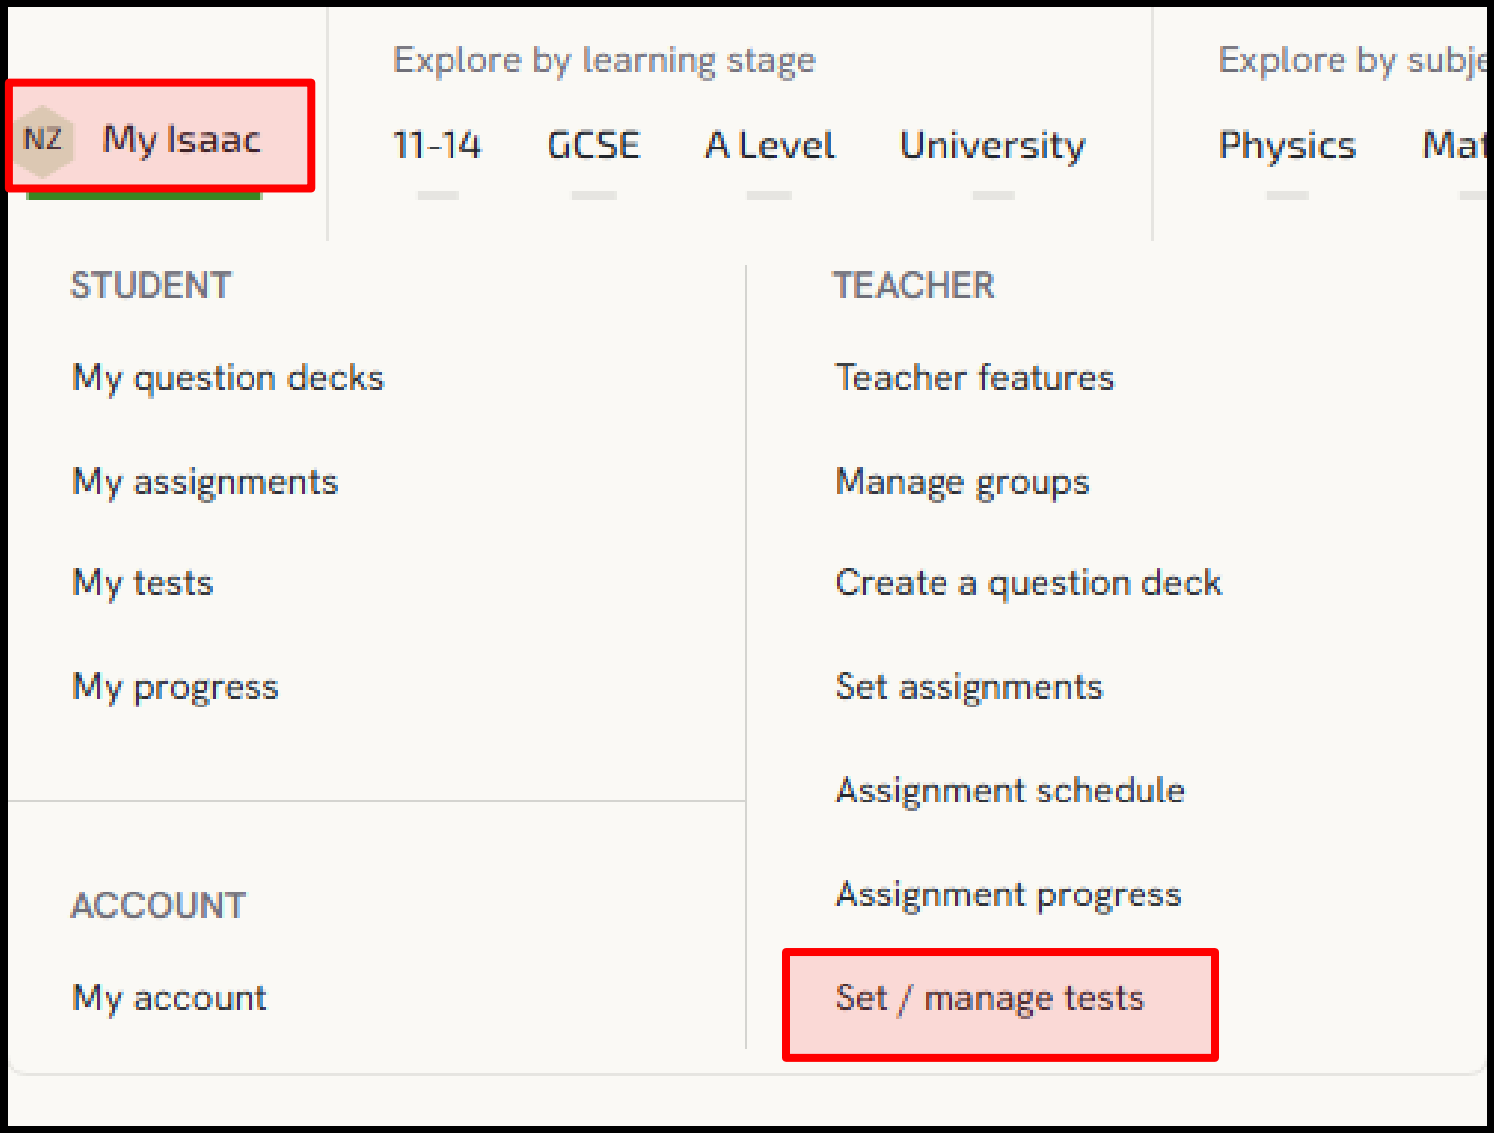
Nick Davies February 2026

Decks vs. tests

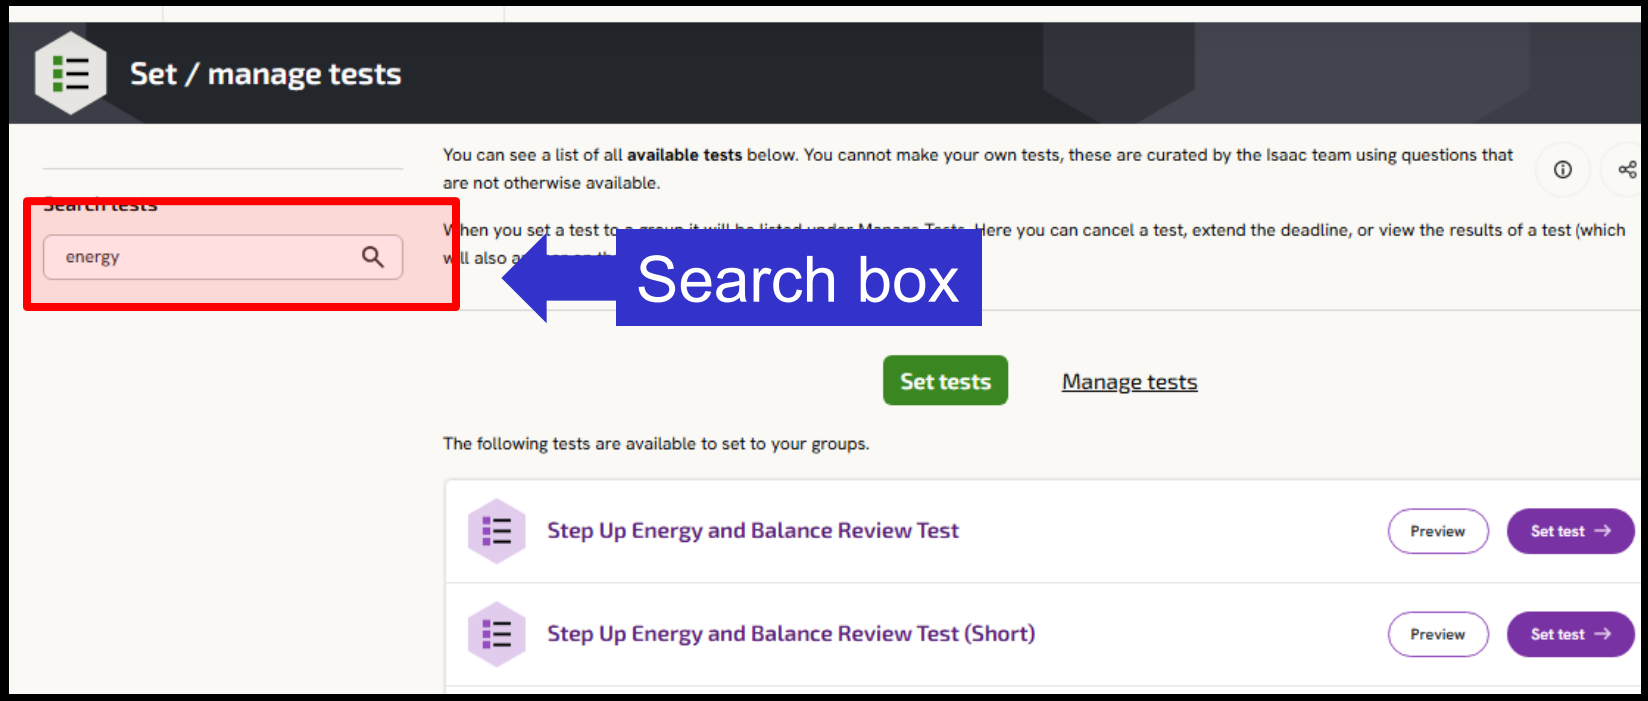
- With ‘normal’ Isaac Science questions, students see whether they are correct, or not, immediately
  - some
- With test ed all the te
  - there
- Isaac Sc
- Isaac Sc
- As with all these systems, you learn by doing, so do it with a ‘nice’ class first.
- (Or set up a test group – see final slide).

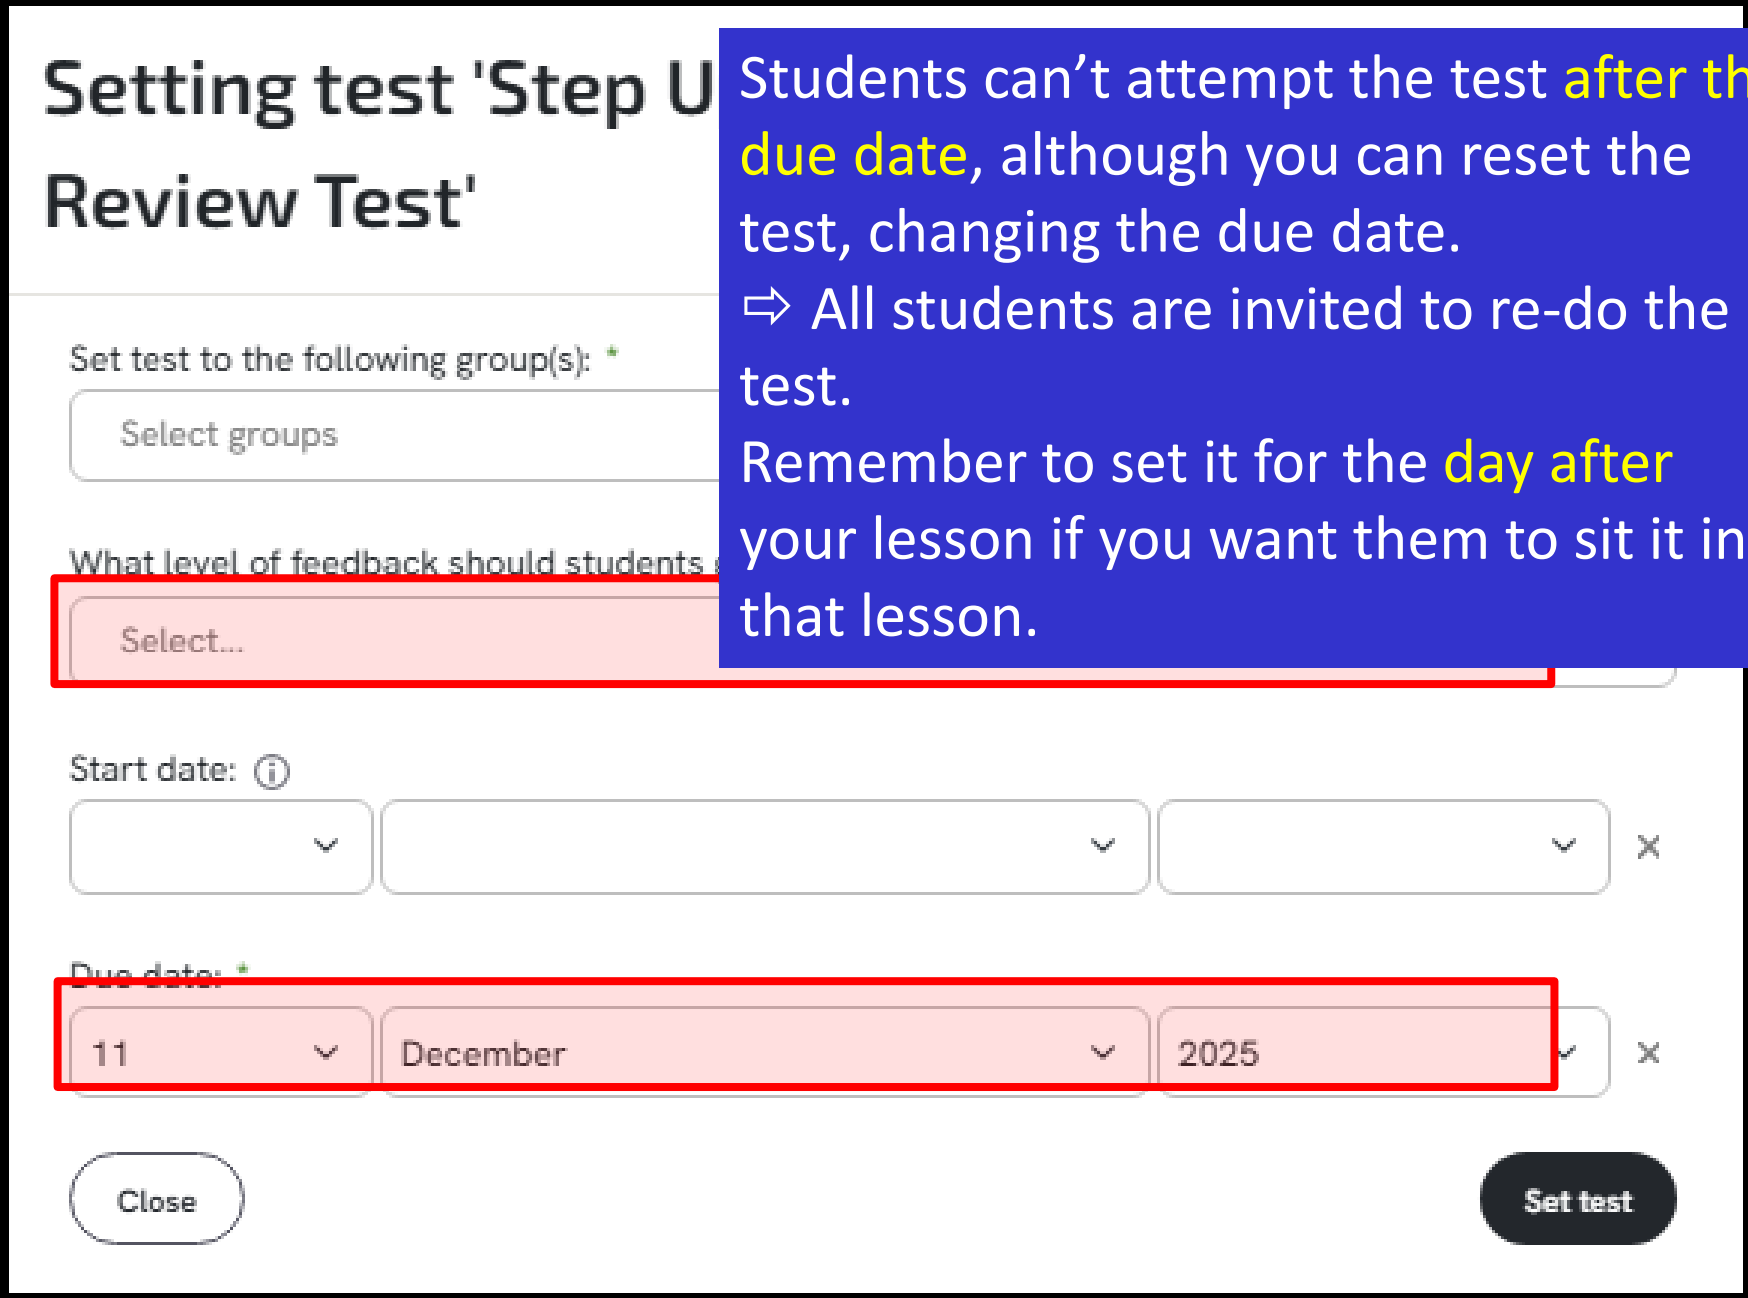


Choosing tests



Quite a few tests now





Students can't attempt the test after the due date, although you can reset the test, changing the due date.

⇨ All students are invited to re-do the test.

Remember to set it for the day after your lesson if you want them to sit it in that lesson.

Step Up Energy and Balance Review Test Feedback

Test

Subject: Physics

Topic: Mechanics

Sections

Overview

Set by: N. Z-Davies

Completed: 05/12/2025

This is a review test on Energy and Balance which can be used after studying the Energy and Balance cha

advise that students have already completed the Review Question Assignment to practise for this test.

Throughout this test you should use $g = 10\,\mathrm{m/s^2}$ as the acceleration due to gravity.

If the question does not tell you differently you should give your answers to these questions to 2 or 3 sign

Your mark is 2 / 11

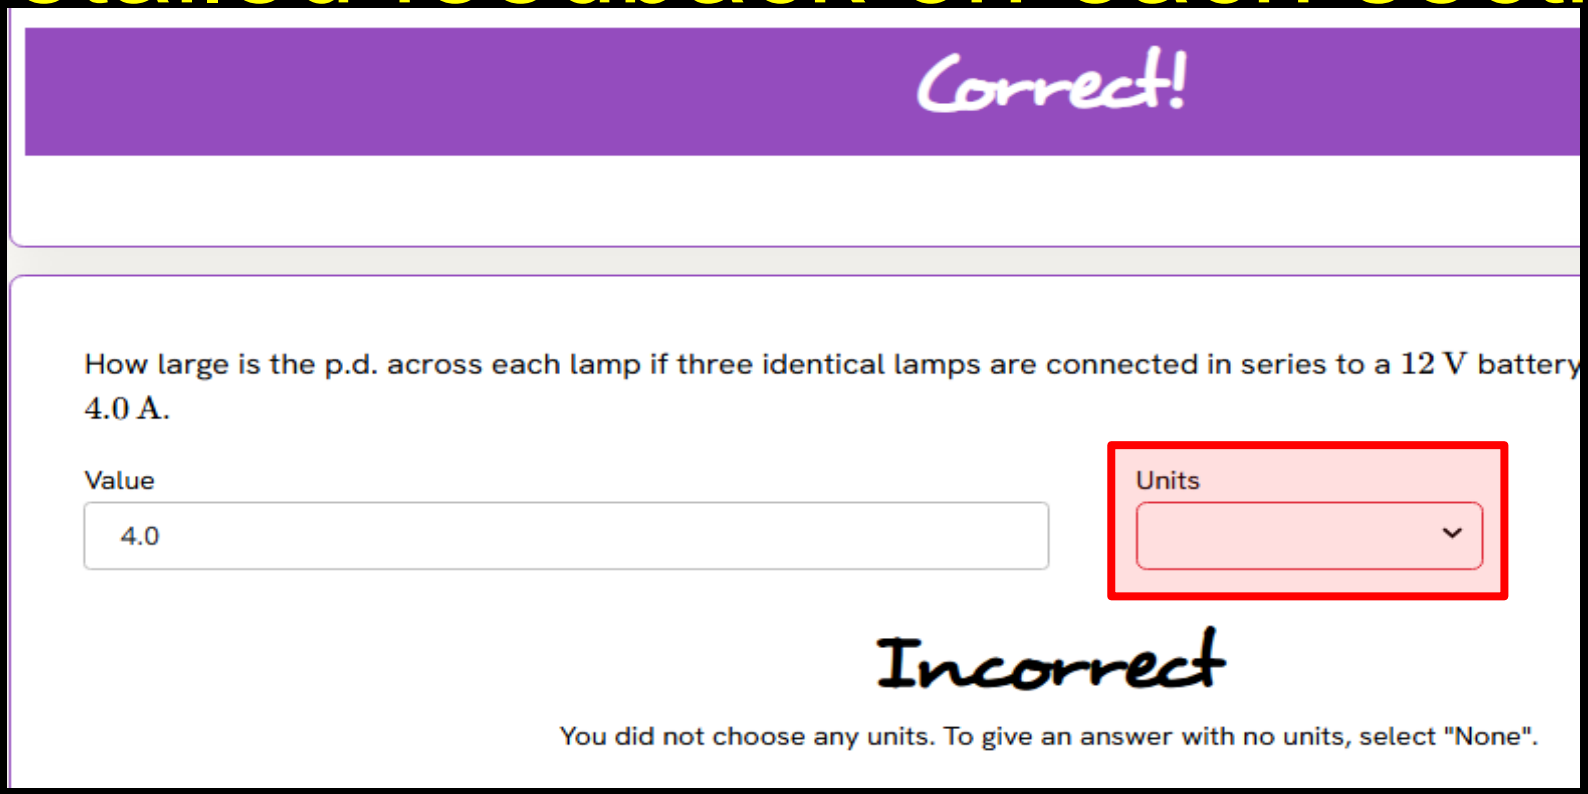
Detailed feedback on each section



Some tests ask for units,
….. which caught me out, sadly

Only on tests can you see an individual student's actual answer

Useful tips where students have gone wrong

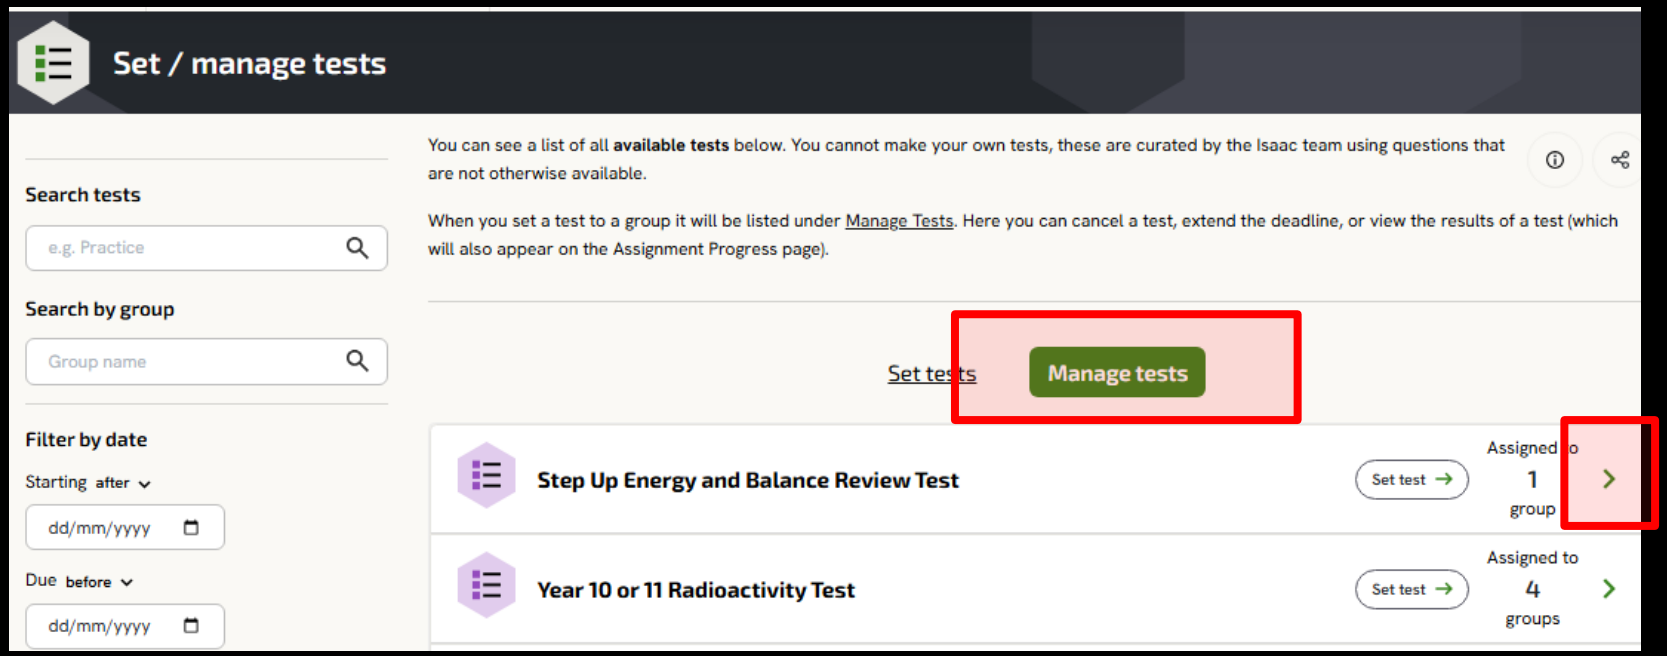
A cyclist on a bike has a total (bike + cyclist) weight of $800\,\mathrm{N}$. The contact area of each wheel with the ground is $4.0\,\mathrm{cm}^2$. Calculate the pressure on the ground.

Value	Units
200	$\mathrm{N/cm^2}$

Incorrect

Bear in mind there are two wheels.

Manage tests



To change the level of feedback, click the twisty arrow on the right.
Maybe after they both classes have done the test.

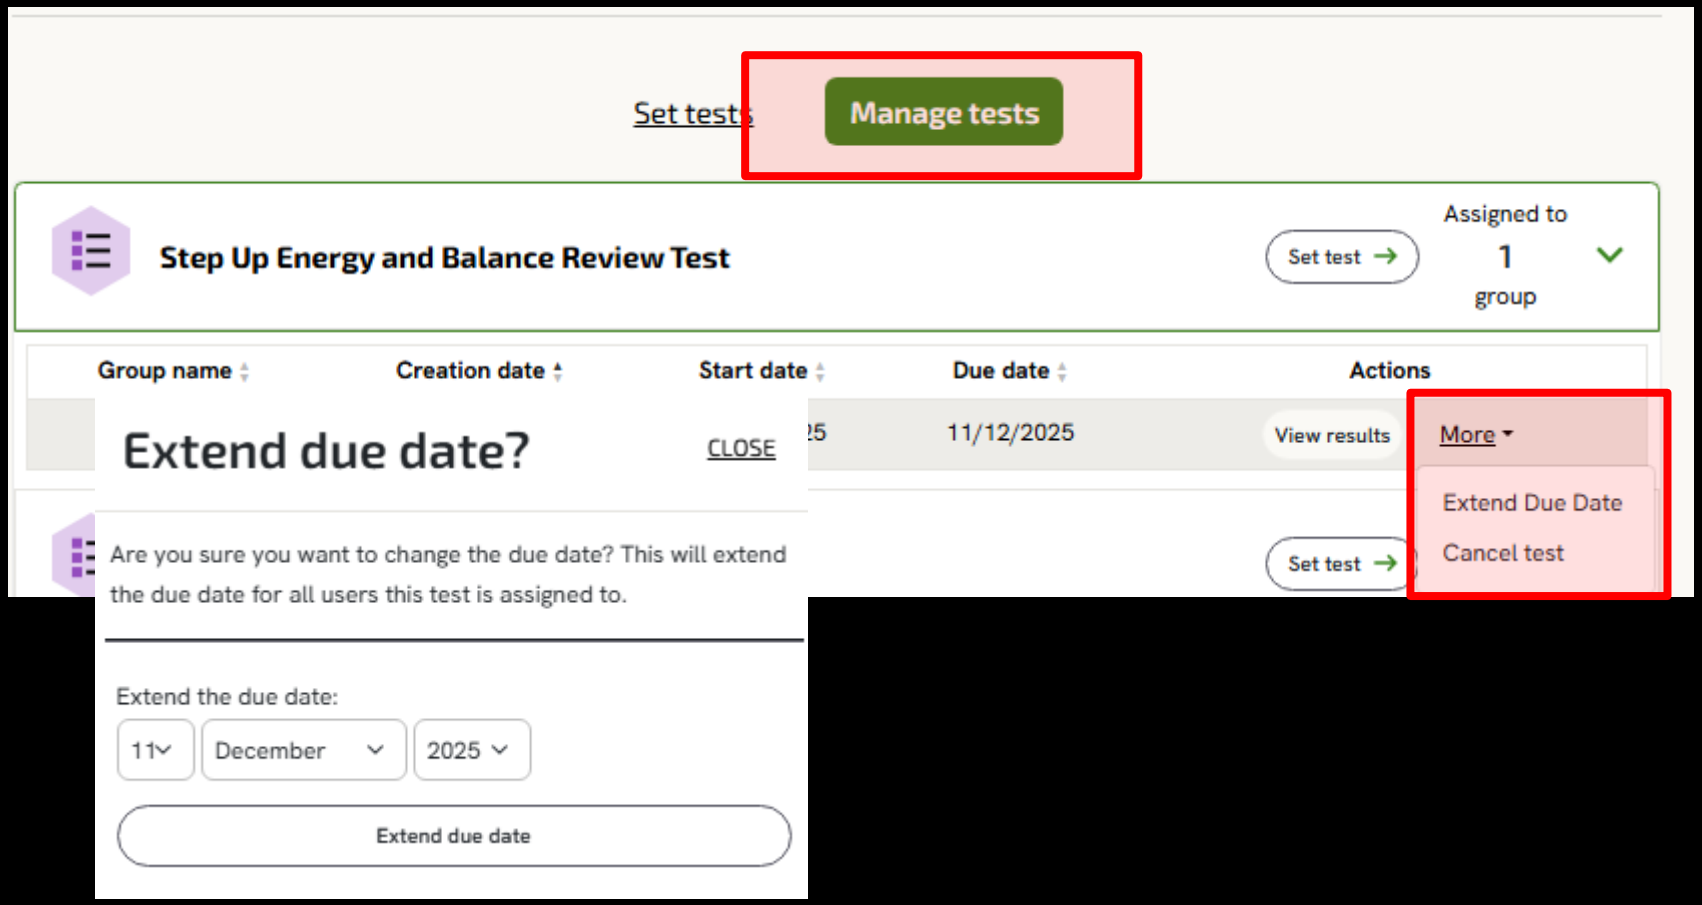
Title	Start Date	
Year 10 Electricity Test	05/07/2021	→
Year 10 Energy Test	06/07/2021	→
Year 10 Force and Motion Test	06/07/2021	→
Year 10 Internal Energy, Gases and Density Test	06/07/2021	→
Year 10 Trilogy Electricity Test	06/07/2021	→

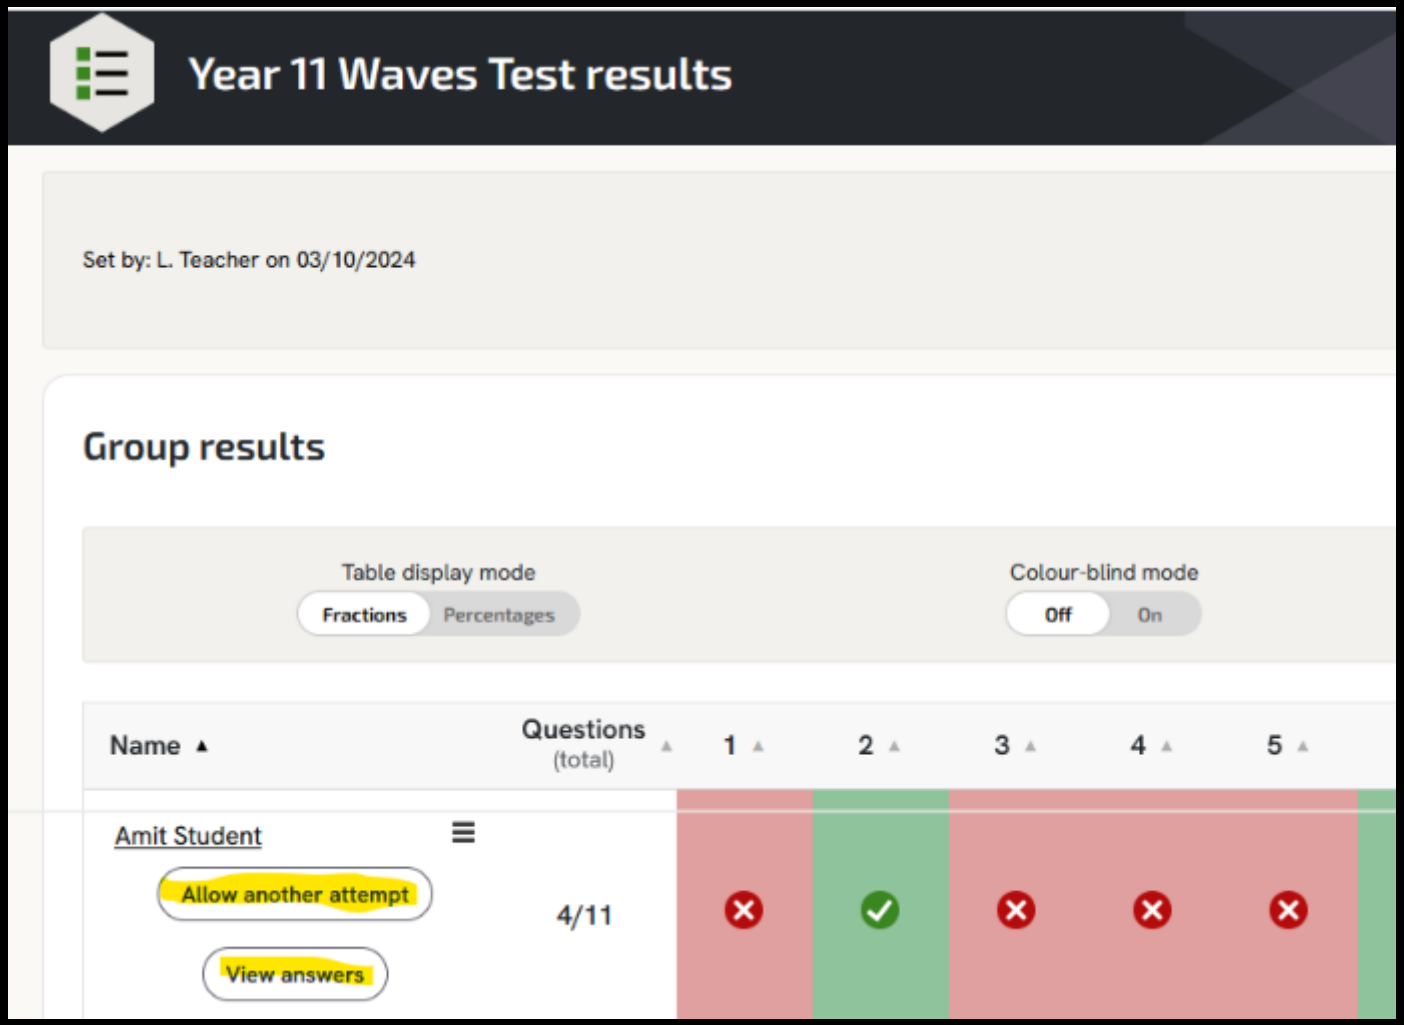
If they try to have a go at a test that they know they are about to sit

Can all students repeat tests?

You can allow another attempt if you have set a due date that has not yet expired



What about just one student?



When a student is *removed* from a group after completing a test

- for teacher: they disappear from the assignment/test progress pages, so the teacher can no longer easily find the progress for that student
- for student: the test goes from My Tests, so they have no easy way to access it or see if it was completed
  - the feedback page has a unique URL, which still works even after removal from group.
- if student rejoins, then test results reappear in the usual place.

What students see at start of test

Physics Admissions Practice 7

Set by: N. Z-Davies

Due: 11/12/2025

Test

Subject: Physics

Topic: N/A

Sections

Overview

Section 1 of 1

Key

Section not started

Please be aware that for tests your answer to each question **will be visible to your teacher(s) after you submit your test** so that they can provide further feedback and support if they wish to do so.
Assignments are different. We do not share with your teachers any of your entered answers or the number of your attempts to questions in assignments.

These tests aim to help students prepare for university admissions, develop fluency in the topics and improve the speed at which they work.

Note: Some questions in this practice test go beyond what is required for the ESAT.

This test contains **7** multiple choice questions based on **GCSE & AS Level** concepts. You should attempt these **without a calculator**, and spend no more than **20 minutes** on the test.

Test finished?

Please be aware that for tests your answer to each question **will be visible to your teacher(s) after you submit your test** so that they can provide further feedback and support if they wish to do so.
Assignments are different. We do not share with your teachers any of your entered answers or the number of your attempts to questions in assignments.

This test will give you some practice using the following ideas:

- acceleration is the rate of change of velocity
  i.e. it is the increase in velocity divided by the time taken,
  or the number of $\mathrm{m/s}$ increase in velocity every single second.
- $a = \frac{(v-u)}{t}$
- v is the final velocity, u is the starting (initial) velocity, t is the time taken for the change.
- Units of a are $\mathrm{m/s^2}$
- For v and u we often just talk about speeds rather than velocity. This is when the motion is in a straight line.

Test sections

- Section 1 of 1 11 / 12

Submit anyway

0 / 1 sections complete

Continue

Clicking 'Submit' is final

Timed tests

- You can use the tests in place of some (not all) of the traditional tests that we set students in the past.
- There is no timing facility within Isaac
- Do the timing yourself...

- And the marking is easy.

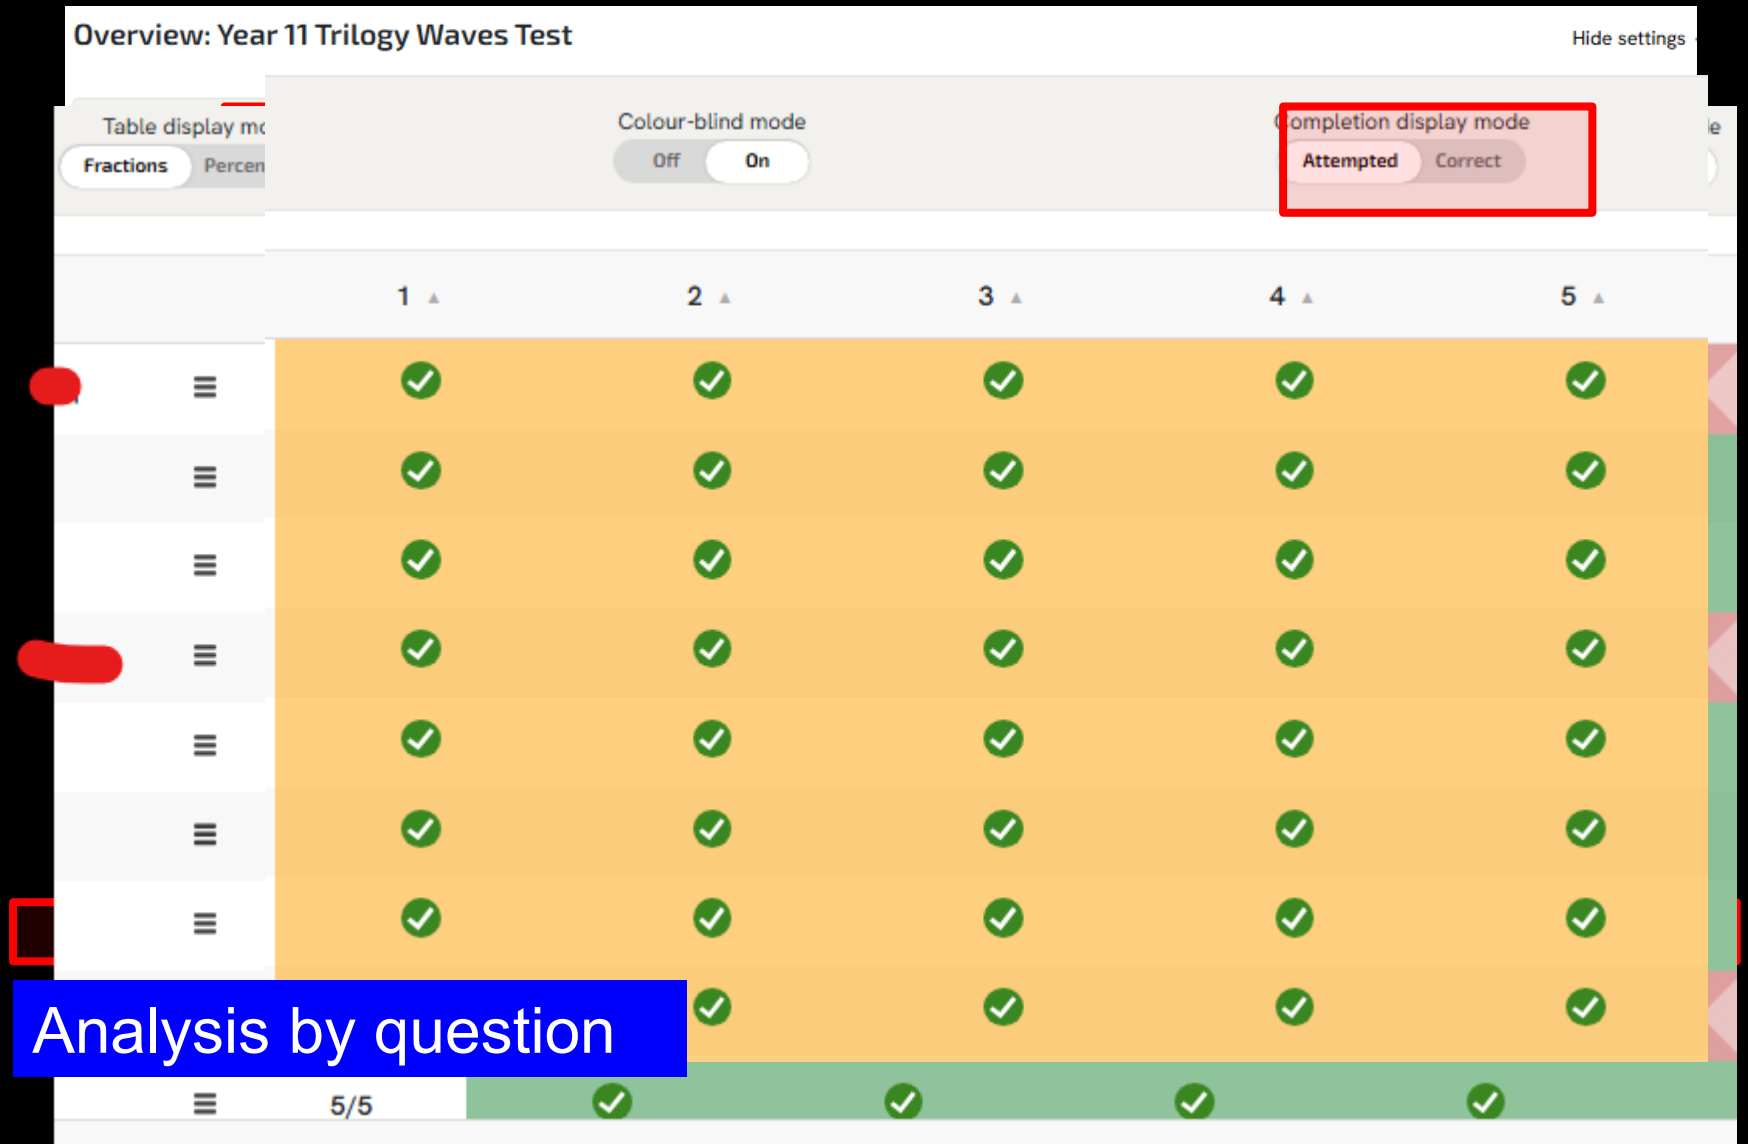
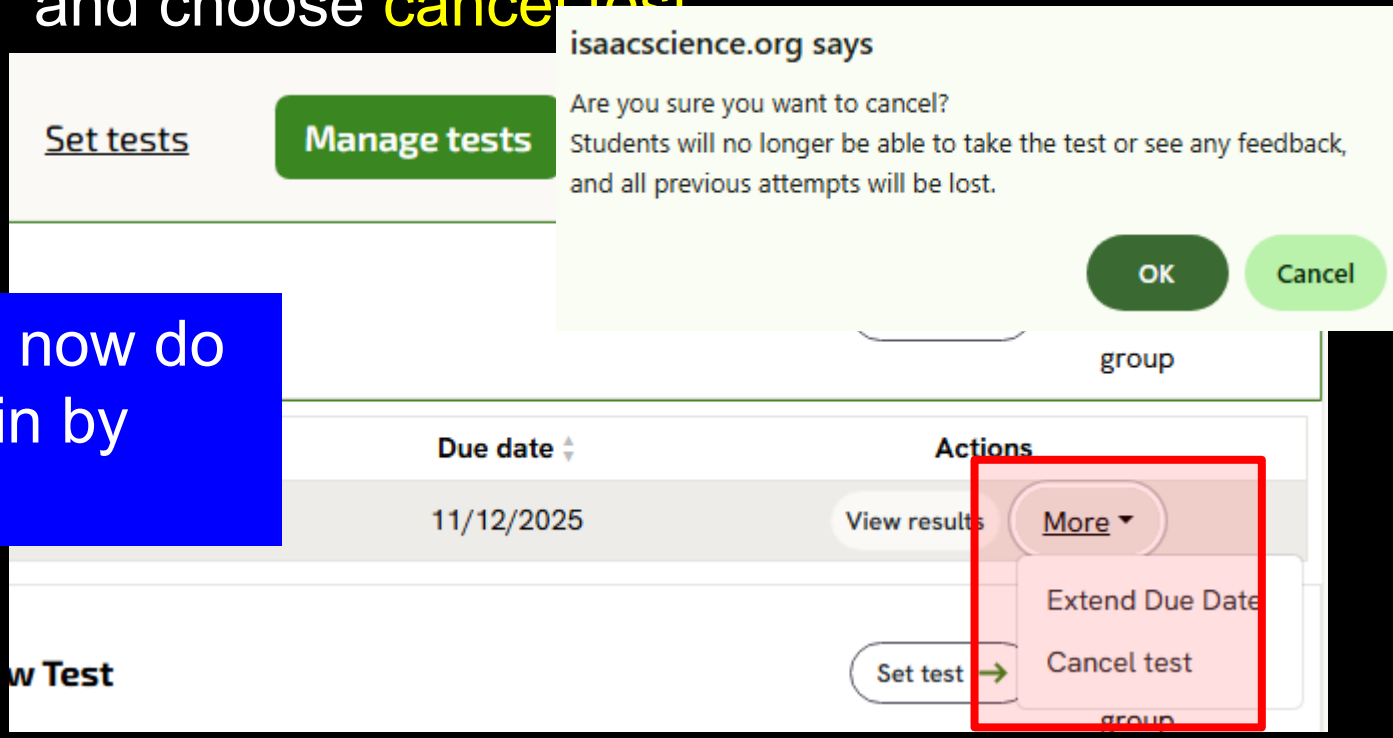
Analysis



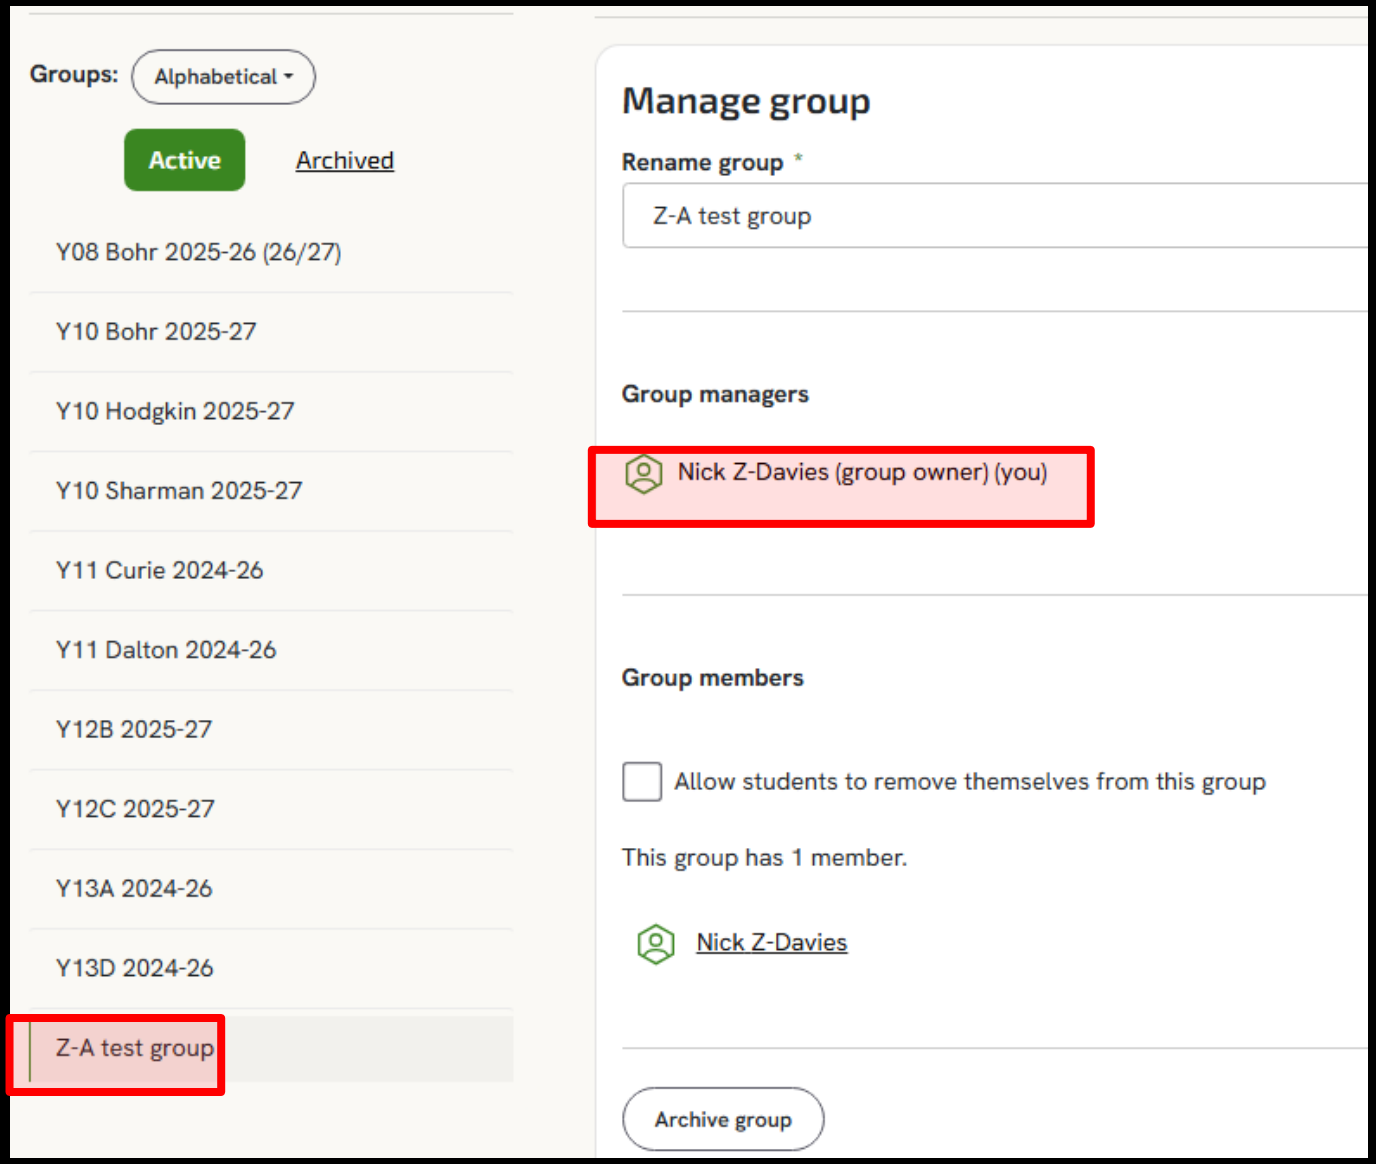
Analysis by question

Cancelling tests

- Once you have recorded your test results.
- Go to manage tests
- Select the test to be cancelled
- click ‘More’ and choose cancel test



Students can now do the tests again by themselves

Having a ‘play’


I have set up a group called Z – A test group and I am the only ‘student’ in it, so I can see it from the students’ point of view.
