Physics Resources from 11 to University

Questions from our books and problem-solving selection are found using the **Question Finder**: <https://isaacphysics.org/questions>

Ready-to-set boards of questions, lessons and revision resources are found using the **drop-down learn menu**.

Teachers can set **assignments and tests**: all **automarked with feedback**. For tests, teachers can select the level of feedback.

All our questions are categorised by **stage and difficulty** and our GCSE and A Level book boards of questions are linked to exam board specification tables.

Question sources and types

Our physics resources are a mix of original questions, past paper exam questions and questions from competitions. There are different input formats: multiple-choice, drag-and-drop, short text input, numerical and also questions for which the answers are algebraic expressions or nuclear equations (we have a special equation editor for these, or students can type in using code).
