

Pressure Practice

- 1 Fill in the blanks using the words **force**, **pressure** and **area**:

A farmer needs to drive a van into a muddy field.

To stop it getting stuck in the mud, the farmer gets some planks of wood. They put them across the field, and drive the van so that the wheels stay on the planks.

The farmer explains it like this: The planks have a large _____ and spread out the _____ so that the _____ is much lower. This means that the wheels don't sink.

- 2 Do you want a high or low pressure? How did you decide?

(a) Under a cook's knife blade as it cuts an onion

(b) Under a chopping board for protecting the kitchen surface from the knife

- 3 A carpenter is hammering a nail into a board. Complete the table to compare the force, pressure and area of the point of the nail compared to its head. Choose from the words **larger**, **smaller** and **equal**.

	On point of nail compared to head,
Area	area is
Pressure	pressure is
Force	force is

- 4 The fluid in the jack used in a lift is at a pressure of 25 N/cm^2 .

(a) Complete the sentence: The force on 1 cm^2 is _____ newtons.

(b) Work out the force on a 200 cm^2 piston using an equation.

$$\begin{array}{rclclcl}
 \text{force (N)} & = & \text{pressure (N/cm}^2\text{)} & \times & \text{area (cm}^2\text{)} \\
 \boxed{} & = & \boxed{25} & \times & \boxed{}
 \end{array}$$

(c) Work out the force on a 15 cm^2 piston.

$$\begin{array}{rclclcl}
 \text{force (N)} & = & \text{pressure (N/cm}^2\text{)} & \times & \text{area (cm}^2\text{)} \\
 \boxed{} & = & \boxed{25} & \times & \boxed{}
 \end{array}$$

(d) Work out the force for a 100 cm^2 piston used in the lift.

5 Calculate the force on these areas if the pressure is 100 N/cm^2 .

(a) 3 cm^2

(b) 0.5 cm^2

A pressure of $30 \text{ N/m}^2 = 30 \text{ Pa}$ means that there is a force of _____ on each _____.

6 Calculate the force on these areas if the pressure is $100\,000 \text{ Pa}$ (atmospheric pressure).

(a) 0.02 m^2

(c) 0.0001 m^2 (which is 1 cm^2)

(b) 200 m^2

(d) 300 cm^2

7 An 80 N force is spread over a 400 cm^2 area.

(a) Force on $1 \text{ cm}^2 = \boxed{} \div \boxed{} = \boxed{}$ newtons

(b) Complete the sentence: The pressure (in N/cm^2) is $\boxed{}$.

(c) A 160 N force is applied over 400 cm^2 . Work out the pressure using an equation.

$$\begin{array}{ccccc} \text{force (N)} & = & \text{pressure (N/cm}^2\text{)} & \times & \text{area (cm}^2\text{)} \\ \boxed{} & = & \boxed{} & \times & \boxed{400} \end{array}$$

(d) Work out the pressure if 3 kN is applied over an area of 15 cm^2 . ($1 \text{ kN} = 1000 \text{ N}$)

8 Calculate the pressure (in N/cm^2) for these forces and areas.

(a) A 650 N person wearing dancing shoes. Each heel has an area of 1.3 cm^2 . All of their weight is supported by the heels.

(b) A $48\,000 \text{ N}$ elephant standing on four feet. Each foot has area 3000 cm^2 .

9 A thick polystyrene sheet is floating on water. It will support a weight while floating, providing the pressure on the water is no more than 0.02 N/cm^2 .

(a) At this pressure, What is the force on 1 cm^2 ?

(b) We want to support a 10 N weight. How many 0.02 N forces is this?

(c) What area of polystyrene is needed? (Each 0.02 N force acts on 1 cm^2 .)

(d) Work out the area needed to support a 40 N chicken using an equation.

$$\begin{array}{ccccc} \text{force (N)} & = & \text{pressure (N/cm}^2\text{)} & \times & \text{area (cm}^2\text{)} \\ \boxed{\quad\quad\quad} & = & \boxed{0.02} & \times & \boxed{\quad\quad\quad} \end{array}$$

(e) Work out the area needed to support a 650 N weight.

10 A force is 60 N. Calculate the area to make these pressures.

(a) 240 N/cm²

(b) 12 N/cm²

11 Complete the word equations.

(a) force =

(b) pressure =

12 Use your understanding of pressure, or the equations, to calculate

(a) the pressure when a 500 N teenager stands on a 200 cm² block.

(b) the force when a 20 N/cm² pressure fluid pushes a 0.5 cm² piston.

(c) the area if a 50 N force makes a 5000 N/cm² pressure.

(d) the pressure of a 270 000 N truck on tyres with total area 1.5 m². Answer in kPa.

Areas can also be measured in square millimetres. 1 mm² = 0.1 cm × 0.1 cm = ____ cm².

13 A drawing pin has a flat area of 1.2 cm² and a point area of 1.2 mm². A person pushes it into a wall with a force of 30 N. Calculate or state

(a) the pressure on the flat area in N/cm²,

(b) the force on the point in N,

(c) the pressure on the point in N/mm²,

(d) the pressure on the point in N/cm².
