

Chemistry A Level Resources

The fields and topics available within chemistry are shown below:

Chemistry questions can be found using the **Question Finder**:

<https://isaacphysics.org/questions>

Curated chemistry **Boards by Topic** are also available:

[https://isaacphysics.org/pages/boards by topic chem](https://isaacphysics.org/pages/boards%20by%20topic%20chem)

Question sources and types

Our chemistry questions are a mix of original questions, past paper exam questions, and questions from competitions. There are different input formats: multiple-choice, drag-and-drop, short text input, numerical and also questions where the answers are algebraic expressions, chemical formulae or chemical equations (we have a special input interface for these). For organic questions, we make use of an external online editor.

Book(s)

An Isaac Physical Chemistry book featuring some of the questions on the site is available, and another Isaac book on organic and inorganic chemistry is in progress

Practice Apps

A new feature, allowing students to independently practise core skills such as titration calculations. New questions are generated each time and the user can request help to be guided through the question step-by-step:
