## Essential Pre-Uni Chemistry F1.9

A Level  
P P P

Specific heat capacity of water =  $4.18 \text{ J g}^{-1} \text{ K}^{-1}$ .

When 5.0 g of ammonium nitrate dissolves in 100 g of water, the temperature of the water drops from  $18^\circ\text{C}$  to  $14^\circ\text{C}$ . Calculate the enthalpy of solution of ammonium nitrate in  $\text{kJ mol}^{-1}$  using the following scheme.

### Part A   Formula

Write down the formula of ammonium nitrate.

---

### Part B   Formula mass

Calculate the formula mass of ammonium nitrate. Give your answer to 3 significant figures.

---

### Part C   Number of moles

Calculate the number of moles of ammonium nitrate in 5.0 g.

---

### Part D   Heat loss of water

Calculate the heat lost from the 100 g of water. Give your answer to 2 significant figures.

---

---

**Part E**    **Molar heat loss of ammonium nitrate**

Calculate the heat lost per mole of ammonium nitrate.

---

---

**Part F**    **Enthalpy of ammonium nitrate**

Give the enthalpy of solution of ammonium nitrate.

$\text{PCl}_5(\text{s})$	$-443.5$	$\text{C}_2\text{H}_4(\text{g})$	$-1410.8$
$\text{POCl}_3(\text{l})$	$-597.1$	$\text{CH}_3\text{COOH}(\text{l})$	$-874.1$
$\text{GeO}(\text{s})$	$-212.1$	$\text{C}_6\text{H}_{14}(\text{l})$	$-4163.0$
$\text{GeO}_2(\text{s})$	$-551.0$	$\text{CH}_3\text{COOC}_2\text{H}_5(\text{l})$	$-2237.9$
$\text{NH}_3(\text{g})$	$-46.1$	$\text{CO}(\text{g})$	$-283.0$
$\text{TiO}_2(\text{s})$	$-939.7$	$\text{Mg}(\text{s})$	$-601.7$

Use the reaction enthalpies given, and the combustion or formation enthalpies above to find the requested enthalpy change in each case:

### Part A $\text{NH}_4\text{Cl}(\text{s})$

$\text{NH}_3(\text{g}) + \text{HCl}(\text{g}) \longrightarrow \text{NH}_4\text{Cl}(\text{s})$ ,  $\Delta_r H^\ominus = -176 \text{ kJ mol}^{-1}$  find  $\Delta_f H^\ominus$  of  $\text{NH}_4\text{Cl}(\text{s})$

---

**Part B**     $\text{MgCl}_2 (\text{s})$

$\text{TiCl}_4 (\text{l}) + 2 \text{Mg} (\text{s}) \longrightarrow 2 \text{MgCl}_2 (\text{s}) + \text{Ti} (\text{s})$   $\Delta_r H^\ominus = -478.4 \text{ kJ mol}^{-1}$ , find  $\Delta_f H^\ominus$  of  $\text{MgCl}_2 (\text{s})$

---

---

**Part C**     $\text{CH}_3\text{COOCOCH}_3 (\text{l})$

$\text{CH}_3\text{COOCOCH}_3 (\text{l}) + \text{H}_2\text{O} (\text{l}) \longrightarrow 2 \text{CH}_3\text{COOH} (\text{l})$   $\Delta_r H^\ominus = -46 \text{ kJ mol}^{-1}$ , find  $\Delta_c H^\ominus$  of  $\text{CH}_3\text{COOCOCH}_3 (\text{l})$  Give your answer to 4 significant figures.

---

---

**Part D**     $\text{C}_6\text{H}_5\text{CHCH}_2$

$4 \text{C}_2\text{H}_2 (\text{g}) \longrightarrow \text{C}_6\text{H}_5\text{CHCH}_2 (\text{l})$ ,  $\Delta_r H^\ominus = -808.2 \text{ kJ mol}^{-1}$ , find  $\Delta_c H^\ominus$  of  $\text{C}_6\text{H}_5\text{CHCH}_2$  Give your answer to 4 significant figures.

---

---

**Part E**     $\text{Al}_2\text{O}_3 (\text{s})$

$4 \text{Al} (\text{s}) + 3 \text{GeO}_2 (\text{s}) \longrightarrow 2 \text{Al}_2\text{O}_3 (\text{s}) + 3 \text{Ge} (\text{s})$   $\Delta_r H^\ominus = -1698.4 \text{ kJ mol}^{-1}$ , find  $\Delta_f H^\ominus$  of  $\text{Al}_2\text{O}_3 (\text{s})$  Give your answer to 4 significant figures.

---

---

**Part F**     $\text{Fe}_2\text{O}_3$

$\text{Fe}_2\text{O}_3 (\text{s}) + 3 \text{CO} (\text{g}) \longrightarrow 2 \text{Fe} (\text{s}) + 3 \text{CO}_2 (\text{g})$ ,  $\Delta_r H^\ominus = -24.8 \text{ kJ mol}^{-1}$ , find  $\Delta_f H^\ominus$  of  $\text{Fe}_2\text{O}_3$

---

---

**Part G**    CuO (s)

$3 \text{ CuO (s)} + 2 \text{ NH}_3 \text{ (g)} \longrightarrow 3 \text{ Cu (s)} + \text{ N}_2 \text{ (g)} + 3 \text{ H}_2\text{O (l)}$ ,  $\Delta_r H^\ominus = -293.3 \text{ kJ mol}^{-1}$ , find  $\Delta_f H^\ominus$  of CuO (s) Give your answer to 3 significant figures.

---

---

**Part H**    H<sub>3</sub>PO<sub>4</sub> (s)

$2 \text{ PCl}_5 \text{ (s)} + 8 \text{ H}_2\text{O (l)} \longrightarrow 2 \text{ H}_3\text{PO}_4 \text{ (s)} + 10 \text{ HCl (g)}$ ,  $\Delta_r H^\ominus = -307.6 \text{ kJ mol}^{-1}$ , find  $\Delta_f H^\ominus$  of H<sub>3</sub>PO<sub>4</sub> (s) Give your answer to 3 significant figures.

---

---

**Part I**    Ga

$\text{Ga}_2\text{O}_3 \text{ (s)} + 3 \text{ Mg (s)} \longrightarrow 2 \text{ Ga (s)} + 3 \text{ MgO (s)}$ ,  $\Delta_r H^\ominus = -716.1 \text{ kJ mol}^{-1}$ , find  $\Delta_c H^\ominus$  of Ga.

---

---

**Part J**    HCl (g)

$\text{TiCl}_4 \text{ (l)} + 2 \text{ H}_2\text{O (l)} \longrightarrow \text{TiO}_2 \text{ (s)} + 4 \text{ HCl (aq)}$ ,  $\Delta_r H^\ominus = -232.3 \text{ kJ mol}^{-1}$ , find  $\Delta_{\text{sol}} H^\ominus$  of HCl (g) Give your answer to 3 significant figures.

# C<sub>3</sub>H<sub>6</sub> Combustion

**A** and **B** are two isomers with the molecular formula C<sub>3</sub>H<sub>6</sub>. The standard enthalpies of formation,  $\Delta_f H^\ominus$ , of both **A** and **B** have been found by first measuring the standard enthalpies of combustion,  $\Delta_c H^\ominus$ , of each. These values are given in the table below, together with the standard enthalpies of combustion of carbon and hydrogen.

	<b>A</b>	<b>B</b>	<b>carbon</b>	<b>hydrogen</b>
$\Delta_c H^\ominus / \text{kJ mol}^{-1}$	−2058	−2091	−393.5	−241.8

## Part A Combustion equation

Give the equation for the complete combustion of C<sub>3</sub>H<sub>6</sub>. (Balance it for one mole of the hydrocarbon.)

---

## Part B $\Delta_f H^\ominus$ of A

Calculate the standard enthalpy of formation of **A**.

---

## Part C $\Delta_f H^\ominus$ of B

Calculate the standard enthalpy of formation of **B**.

---

---

## Part D Isomerisation

Gaseous **B** needs to be stored carefully since it can convert explosively to the elements, to isomer **A**, or to other hydrocarbons. Calculate the standard enthalpy change for the reaction **B**  $\longrightarrow$  **A**.

---

# Homologous Series: Combustion

A Level

A student was studying the enthalpies of combustion of different alkanes, and thinking about the pattern seen when descending the homologous series.

## Part A General equation

The student started by writing a balanced chemical equation for the combustion of a general alkane  $C_nH_{2n+2}$ , by balancing for one mole of the alkane:

Find the correct expressions for  $x$ ,  $y$  and  $z$  as a function of  $n$ .

$x$ :

The following symbols may be useful: n

$y$ :

The following symbols may be useful: n

$z$ :

The following symbols may be useful: n

## Part B Bonds broken

Next, the student was thinking about all the bonds present on the left-hand side of the equation previously balanced, which need to be broken in order to form the products. How many of the different types of bond are present, per molecule of  $C_nH_{2n+2}$ , assuming a correctly balanced equation?

Number of C—C bonds:

The following symbols may be useful: n

---

Number of C—H bonds:

The following symbols may be useful: n

---

Number of O=O bonds:

---

## Part C Bonds formed

The following consideration concerned all the bonds present on the right-hand side of the equation previously balanced, i.e. the bonds formed during the reaction. How many of the different types of bond are present, per molecule of  $C_nH_{2n+2}$ , assuming a correctly balanced equation?

Number of C=O bonds present:

The following symbols may be useful: n

---

Number of O—H bonds present:

---

**Part D    Bond enthalpy assumption**

When using average bond enthalpies to estimate enthalpies of reaction, we must assume that the average values used are representative of the bonding present (we can use different average values, e.g. specific to hydrocarbons to improve estimates). What other assumption about the chemicals present must be met for a calculation using bond enthalpies alone to give a good estimate of the enthalpy of reaction?

---

**Part E    Bond enthalpy calculation**

Using the following bond enthalpies, find an expression for the enthalpy change (in  $\text{kJ mol}^{-1}$ ) of the reaction previously written out (corresponding to the complete combustion of  $\text{C}_n\text{H}_{2n+2}$ ) assuming it is carried out under conditions so that the assumption from the previous part is met. Do not include the units in the expression, and quote numerical values in the expression to 3 s.f.

Bond	Bond enthalpy / $\text{kJ mol}^{-1}$
C–C	348
C–H	412
O=O	498
C=O in $\text{CO}_2$	805
O–H	463

The following symbols may be useful: n

---

---

## Part F    Deviation at RTP

If the combustion is instead carried out at RTP (room temperature and pressure), how would you expect the empirically obtained enthalpy change of combustion of ethane to compare to that calculated using the formula derived above?

The RTP enthalpy change will be  exothermic. This is because  is now present as a  and energy is  during the  as  bonds are formed.
