Today's Focus Points:

- Finding Isaac Chemistry resources
- Using the Question Finder to select questions
- Overview of chemistry topics covered
- Gameboard to showcase different topics and question types
- Boards by Topic
- Using the Chemistry Equation Editor
- Using the Structural Formula Editor
- Applications for practice of key skills

Chemistry Landing Page

Introducing Isaac Chemistry Resources

<https://isaacphysics.org/chemistry>

All the questions and use of the site is completely FREE for all, students and teachers alike.

Like Isaac Physics, Isaac Chemistry resources will focus on developing problem solving skills in chemistry from A-level through to the transition to university. Also like Isaac Physics, we have commissioned a mastery book for pre-university physical Chemistry.

Mastery Book

A Level Chemistry Questions

Free Registration

For Teachers

Developing mastery of essential pre-university chemistry by Dr David Follows

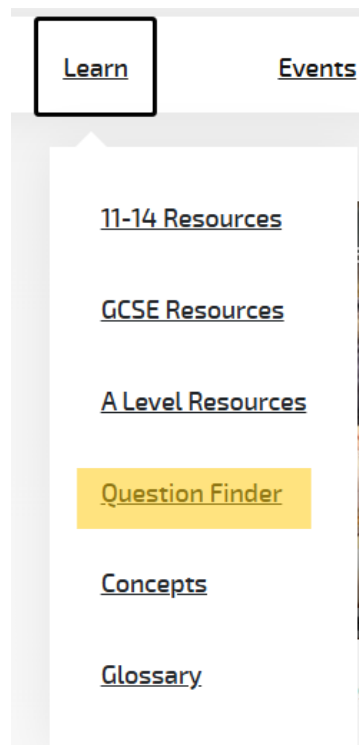

- The first two chapters of this book, aimed at A-level students studying Chemistry, are available to [download as a pdf](#).
- The complete first edition is **now available** for £1 and is purchasable from [Isaac Books](#)
- **See questions from the Mastering Chemistry skills book.** Isaac marks them for you!
- The values for relative atomic masses and the constants used in the book are those given on this [Periodic Table](#)
- **For teachers:** See school [syllabus maps](#) for the pages of this book.

Example Chemistry Questions

Acid-base Terminology

A Level
P P P

The terminology surrounding acids and bases can be a bit confusing. Answer the questions below to test your understanding of this topic.

Part A Fully dissociated

What do we call an acid or base that fully dissociates in aqueous solution?

strong

Correct!

Part B High mol dm⁻³

Part C Low mol dm⁻³

Part D Acidic solutions

An acid with a very high K_a value is a **strong** acid, but it can still be **dilute** if we create a solution of it with large amounts of water. At the same concentration, a **strong** acid will have a lower pH than a **weak** acid.

Items:

strong **weak** **concentrated** **dilute**

Correct!

d-block Electronic Configurations

A Level
P P P

Part A Cr³⁺

Chromium (atomic number 24) is a d-block element. Its compounds are useful reagents in the laboratory.

Using s, p and d notation for electron energy levels, write the electronic configuration of the Cr³⁺ ion.

[Ar] 3d³

Items:
[Ne] [Ar] [Kr] s p d 1 2 3 1 2 3 4 5 6

Correct!

[Periodic table](#)

Part B V²⁺

Which of the following electronic structures corresponds to the V²⁺ ion?

☐ [Ar] 4s¹ 4p²

☒ [Ar] 3d³

☐ [Ar] 3d² 4s¹

Example Chemistry Questions

Shapes of Fluorides

A Level

For each of the following, enter a one to two word answer, using appropriate shape of molecule terminology, e.g. "linear".

Part A BF_3

Describe the shape of BF_3 .

pyramidal

Incorrect

Check my answer

Hint 1

Concepts

Shapes of molecules

Shapes of Molecules

Valence Shell Electron Pair Repulsion theory

All stages

The shapes of molecules can be determined using Valence Shell Electron Pair Repulsion (VSEPR) theory which states that pairs of electrons in the valence shell of the central atom will be arranged as far apart as possible to minimise repulsion between them.

A Level

Step 1: determine number of electron pairs

First we need to find the number of electron pairs (or the number of areas of electron density) around the central atom, by accounting for all the valence electrons.

Each **single bond** from the central atom uses **one of its valence electrons**. The other electron in the bond is assumed to come from the atom it is bonded to. Therefore any **single bond** counts as **one electron pair**.

BF_3

3 valence
electrons
from B

3 x B-F bonds

= 3 electron
pairs

CH_4

4 valence
electrons
from C

4 x C-H bonds

= 4 electron
pairs

PCl_5

5 valence
electrons
from P

5 x P-Cl bonds

= 5 electron
pairs

Figure 1: Structures of BF_3 , CH_4 and PCl_5

Note that the octet rule is **not necessarily obeyed** in this model! Remember to include any contribution from overall charge on the molecule to the number of valence electrons.

Compounds from But-2-ene

A Level

Complete the reaction scheme shown below which starts with but-2-ene. In each of the boxes **A** to **D** give the principal organic product or intermediate compound.

Use the [structure editor](#) to generate a SMILES string.

Figure 1: Compounds from but-2-ene

In the editor, after drawing your structure, click on the round, yellow smiley face to generate a SMILES string. Copy the SMILES string and paste it in the answer box.

Example Chemistry Questions

Competing Reactions

A Level
P P P

A compound X can produce two possible products, Y and Z, under the same reaction conditions. An energy profile for this reaction can be represented as shown below.

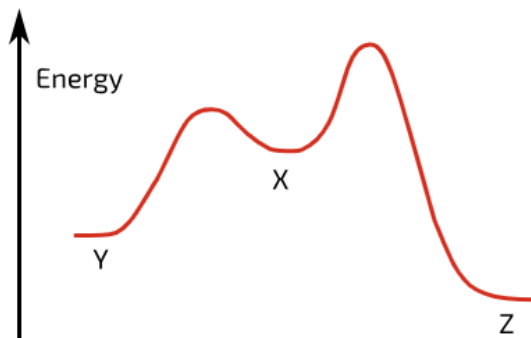

Figure 1: A reaction profile for the reaction described.

Part A Activation energy

The *activation energy* is the energy required for a reaction to take place. It is given by the difference in energy between the and the state. In the set-up above, the reaction producing product Y has a activation energy than the process producing product Z due to the state being in energy for the former.

Items:

Part B Molecular speed distribution

What do we call the distribution of molecular speeds?

Type your answer here.

Check my answer

What does this distribution look like (assume particle speed is on the x-axis, and number of particles on the y-axis)?

Click on the grid to edit your sketch.

Correct!

Make sure your graph starts at the origin, goes through a maximum and then levels out but doesn't reach 0.

See the concept page on the [Maxwell-Boltzmann distribution](#) for some examples.

Example Chemistry Questions

Titrating Sulfur Dioxide

A Level

Sulfur dioxide is a by-product of the combustion of coal in power stations. It can react with oxygen and water vapour in the air to form sulfuric acid, H_2SO_4 . This is one of the causes of acid rain.

The amount of sulfur dioxide in the air may be determined by bubbling a sample of the air through sodium hydroxide solution, where it reacts according to the equation below:

The concentration of the unreacted sodium hydroxide can be determined by titration against a standard solution of hydrochloric acid.

1000 dm^3 of air were bubbled through 200 cm^3 of a 1.00 mol dm^{-3} solution of sodium hydroxide. The remaining solution was diluted to 1000 cm^3 with water, and 25.0 cm^3 of this solution was neutralised by 20.4 cm^3 of a $0.100 \text{ mol dm}^{-3}$ solution of hydrochloric acid.

Part A H_2SO_4 formation

Construct an overall equation for the formation of sulfuric acid from sulfur dioxide (do not include state symbols). Balance it so as to use the smallest possible integer coefficients.

Click to enter your answer

Check my answer

Part C Unreacted moles

Find the amount, in moles, of unreacted sodium hydroxide.

Value

?

Unit

mol

Check my answer

Part D Sulfur dioxide moles

Find the amount, in moles, of sulfur dioxide in 1000 dm^3 of air.

Value

?

Unit

mol

Check my answer

Part E Percentage by volume

Hence calculate the percentage by volume of sulfur dioxide in air. (You may assume 1 mol of any gas occupies 24 dm^3 at this temperature and pressure.)

Value

?

Unit

%

Applications for Skills Practice

Buffer Calculations Practice

Created by
Andrea
Chlebikova

Generate new question

A student mixes 400 cm^3 of 0.090 mol dm^{-3} methanoic acid ($\text{pK}_a = 3.75$) and 200 cm^3 of 0.012 mol dm^{-3} sodium methanoate.

Calculate the **pH** of the resulting buffer solution (applying the weak acid approximation).

check

https://isaacphysics.org/pages/chemistry_app_overview

Applications for Skills Practice

I would like some more help

Relevant formulae: $n = cV$ $\text{p}K_{\text{a}} = -\log_{10} K_{\text{a}}$ $\text{pH} = -\log_{10} [\text{H}^+]$ $K_{\text{a}} = \frac{[\text{H}^+][\text{A}^-]}{[\text{HA}]}$

How many moles of methanoic acid have been added?

PART-CALCULATION QUESTION

mol

Work in Progress (input very welcome!)

- More **practice apps**: what areas would be most helpful?
- Practice “tests” for students to **identify gaps** and **practise weaknesses** identified similar to current apps
- **Syllabus map**: what format and what level of granularity?
- Improving **hint provision** in questions and **concept pages**
- More questions on platform: KS3, **GCSE** and University-level
+ Any A Level areas which would benefit from expanding (spectroscopy, specification-dependent topics, ...)
- **Book** compiling organic and inorganic questions
- **Tests** on Isaac platform: allow setting of questions students cannot see ahead of time; students cannot reattempt tests (unless teacher allows reattempt) and teachers can see what answers students have submitted

Thank you!
