

## Question

### Differentiation from First Principles 1

Pre-Uni Maths for Sciences J3.1 & J3.2

**Subject & topics:** Maths | Calculus | Differentiation      **Stage & difficulty:** A Level P2

---

To differentiate a function  $f(x)$  from first principles involves taking a limit. The derivative of  $f(x)$  is given by the expression

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}.$$

Part A

Differentiate  $x^3$  from first principles

Differentiate  $x^3$  from first principles. Drag and drop options into the spaces below.

In this question  $f(x) = x^3$ . Therefore,  $f(x + h) =$ . Substituting this into the expression for  $f'(x)$ ,

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x + h) - f(x)}{h} = \lim_{h \rightarrow 0} \frac{\text{} - x^3}{h}.$$

Next, expand the brackets in the numerator and simplify:

$$f'(x) = \lim_{h \rightarrow 0} \frac{(x^3 + 3x^2h + 3xh^2 + h^3) - x^3}{h}$$

$$f'(x) = \lim_{h \rightarrow 0} \frac{\text{}}{h} = \lim_{h \rightarrow 0} \text{}.$$

Finally, take the limit. As  $h \rightarrow 0$ , the term containing  $x^2$  is unchanged (because it does not depend on  $h$ ), but the terms containing  $xh$  and  $h^2$  tend to 0. Therefore,

$$f'(x) = \text{}.$$

Items:

3x

$x^3h^3$

$(x + h)^3$

$3x^2$

$3x^2 + 3xh + h^2$

$2x^2h + 2xh^2 + h^3$

$3x^2h + 3xh^2 + h^3$

$x^2h + xh^2 + h^3$

$x^2 + xh$

Part B

Differentiate  $2x^3 + 5$  from first principles

Differentiate  $2x^3 + 5$  from first principles. Drag and drop options into the spaces below.

In this question  $f(x) = 2x^3 + 5$ . Therefore,  $f(x + h) =$ . Substituting this into the expression for  $f'(x)$ ,

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x + h) - f(x)}{h} = \lim_{h \rightarrow 0} \frac{\text{} - (2x^3 + 5)}{h}.$$

Next, just as in part A, expand the brackets in the numerator. After simplification, this produces:

$$f'(x) = \lim_{h \rightarrow 0} \text{}.$$

Finally, take the limit. As  $h \rightarrow 0$ , the term containing  $x^2$  is unchanged (because it does not depend on  $h$ ), but the terms containing  $xh$  and  $h^2$  tend to 0. Therefore,

$$f'(x) = \text{}.$$

## Question

### Differentiation from First Principles 3

Pre-Uni Maths for Sciences J3.5

**Subject & topics:** Maths | Calculus | Differentiation    **Stage & difficulty:** A Level P2

---

Differentiating from first principles involves taking a limit. The derivative of  $y$  with respect to  $x$  is given by

$$\frac{dy}{dx} = \lim_{\delta x \rightarrow 0} \frac{\delta y}{\delta x}.$$

In this expression  $\delta y$  is the small change in  $y$  produced by  $\delta x$ , a small change in  $x$ .

The value of  $\frac{dy}{dx}$  at a point on a curve is the gradient of the tangent to the curve at that point.

Part A

**Expand**  $(x + a)^4$

Expand  $(x + a)^4$  and simplify as far as possible.

The following symbols may be useful:  $a$ ,  $x$

Part B

Differentiate  $y = 9x^4 - 8x$  from first principles

Differentiate  $y = 9x^4 - 8x$  from first principles. Drag and drop options into the spaces below.

Consider the coordinates  $(x, y)$  of a point on the curve  $y = 9x^4 - 8x$ . When  $x$  increases by  $\delta x$  to  $x + \delta x$ ,  $y$  changes to  $y + \delta y =$ . Substituting this into the expression for the derivative,

$$\frac{dy}{dx} = \lim_{\delta x \rightarrow 0} \frac{(y + \delta y) - y}{\delta x} = \frac{dy}{dx} = \lim_{\delta x \rightarrow 0} \frac{(\text{input}) - (9x^4 - 8x)}{\delta x}.$$

Using the answer to part A gives

$$\frac{dy}{dx} = \lim_{\delta x \rightarrow 0} \frac{\text{input} - (9x^4 - 8x)}{\delta x}$$

$$\frac{dy}{dx} = \lim_{\delta x \rightarrow 0} (\text{input} + \text{input} \delta x + 36x(\delta x)^2 + 9(\delta x)^3).$$

Finally, take the limit. As  $\delta x \rightarrow 0$ , the terms containing  $\delta x$  tend to 0. Therefore,

$$\frac{dy}{dx} = \text{input}.$$

Items:

- $x^4 - 8x + 4x^3(\delta x) - 8(\delta x) + 6x^2(\delta x)^2 + 4x(\delta x)^3 + (\delta x)^4$

$9x^3 - 8$

$9x^4 + 9(\delta x)^4 - 8x - 8(\delta x)$

$36x^3 - 8$
- $9x^4 + 36x^3(\delta x)$

$9(x + \delta x)^4 - 8(x + \delta x)$

$9x^4 - 8x + 36x^3(\delta x) - 8\delta x + 54x^2(\delta x)^2 + 36x(\delta x)^3 + 9(\delta x)^4$

$54x^2$

Part C

Gradient of tangent

Find the gradient of the tangent to the curve at the point  $(1, 1)$ .

## Question

### Differentiation (powers of x) 3ii

**Subject & topics:** Maths    **Stage & difficulty:** A Level P2

---

Find  $\frac{dy}{dx}$  in each of the following cases.

#### Part A

##### Algebraic fraction

$$y = \frac{(3x)^2 \times x^4}{x}.$$

The following symbols may be useful: x

#### Part B

##### Cube root

$$y = \sqrt[3]{x}.$$

The following symbols may be useful: x

Part C

Reciprocal

$y = \frac{1}{2x^3}.$

The following symbols may be useful: x

## Question

### Differentiating Powers 4

Pre-Uni Maths for Sciences J1.6

**Subject & topics:** Maths | Calculus | Differentiation **Stage & difficulty:** A Level P1

#### Part A

**Derivative of**  $v = Bu^{-3}$

Find  $\frac{dv}{du}$  if  $v = Bu^{-3}$ , where  $B$  is a constant.

The following symbols may be useful: B, u

#### Part B

**Force if potential**  $V = \frac{q^2}{4\pi\epsilon_0 r}$

The electrostatic potential energy  $V$  of two equal charges  $q$  a distance  $r$  apart is given by  $V = \frac{q^2}{4\pi\epsilon_0 r}$ , where  $\epsilon_0$  and  $q$  are constants. The force between the two charges is given by  $-\frac{dV}{dr}$ ; find an expression for this force.

The following symbols may be useful: epsilon\_0, pi, q, r

## Question

### Gradient Function: Tangents and Normals 1i

**Subject & topics:** Maths    **Stage & difficulty:** A Level P2

---

A curve has equation  $y = x^2 + x$ .

#### Part A

##### Gradient

Find the gradient of the curve at the point where  $x = 2$ .

#### Part B

##### Normal

Find the equation of the normal to the curve at the point for which  $x = 2$ , giving your answer in the form  $ax + by + c = 0$ , where  $a$ ,  $b$  and  $c$  are integers.

The following symbols may be useful:  $x$ ,  $y$

Part C

Find  $k$

Find the values of  $k$  for which the line  $y = kx - 4$  is a tangent to the curve.

## Question

### Stationary Points 2ii

**Subject & topics:** Maths    **Stage & difficulty:** A Level P2

#### Part A

#### Find coordinate

Find the coordinates of the stationary points on the curve  $y = x^3 - 3x^2 + 4$ .

(  ,  )

#### Part B

#### Stationary point

Determine the natures of the stationary points of  $y = x^3 - 3x^2 + 4$ .

- ☐ There is a single inflection point
- ☐ The stationary point with the smallest  $x$ -coordinate is a minimum point and the stationary point with the largest  $x$ -coordinate is a maximum point.
- ☐ The stationary point with the smallest  $x$ -coordinate is a maximum point and the stationary point with the largest  $x$ -coordinate is a minimum point.

Part C

Range of  $x$

For what range of values of  $x$  does  $x^3 - 3x^2 + 4$  decrease as  $x$  increases?

Construct your answer from the items below.

Items:

- <
- >
- $x$
- $< x <$
- $\leq x \leq$
- $< x \text{ or } x <$
- $\leq x \text{ or } x \leq$

## Question

### Stationary Points 3

Pre-Uni Maths for Sciences J2.5

**Subject & topics:** Maths | Calculus | Differentiation      **Stage & difficulty:** A Level C2

---

#### Part A

#### Maximum height of a projectile

A particle is fired upwards into the air with an initial speed  $w$  and moves subsequently under the influence of gravity with an acceleration  $g$  downwards, such that its height  $h$  at time  $t$  is given by  $h = wt - \frac{1}{2}gt^2$ , where  $w$  and  $g$  are constants. Find an expression for its maximum height above its initial position.

The following symbols may be useful:  $g$ ,  $h$ ,  $w$

Part B

Potential energy of two molecules

The potential energy of two molecules separated by a distance  $r$  is given by

$$U = U_0 \left( \left( \frac{a}{r} \right)^{12} - 2 \left( \frac{a}{r} \right)^6 \right)$$

where  $U_0$  and  $a$  are positive constants. The equilibrium separation of the two molecules occurs when the potential energy is a minimum.

Find an expression for the equilibrium separation of the molecules.

The following symbols may be useful:  $U$ ,  $U_0$ ,  $a$ ,  $r$

Find an expression for the potential energy when the molecules are at their equilibrium separation.

The following symbols may be useful:  $U$ ,  $U_0$ ,  $a$ ,  $r$

## Question

### Maxima and Minima: Problems 1ii

**Subject & topics:** Maths    **Stage & difficulty:** A Level P2

**Figure 1** shows a rectangular enclosure, with a wall forming one side. A rope, of length 20 metres, is used to form the remaining three sides. The width of the enclosure is  $x$  metres, and the area of the enclosure is  $A \text{ m}^2$ .

**Figure 1:** The rectangular enclosure.

#### Part A

#### Express as equation

Show that  $A$  can be expressed in the form  $px - qx^2$ , and find this expression.

The following symbols may be useful:  $A$ ,  $x$

Part B

Use differentiation

Use differentiation to find the maximum value of the area of the enclosure,  $A \text{ m}^2$ .

Enter your value of  $A$ :

The following symbols may be useful: A

## Question

### Minimising the Area

Pre-Uni Maths for Sciences J2.2

**Subject & topics:** Maths | Calculus | Differentiation      **Stage & difficulty:** A Level P2

A rectangular cuboid has a base with sides of length  $a$  and  $b$  and a height  $c$ . Its volume  $V$  and height  $c$  are fixed.

#### Part A

#### Volume $V$ and surface area $A$

Write down the equation for the volume  $V$  of the rectangular cuboid in terms of  $a$ ,  $b$  and  $c$ .

The following symbols may be useful:  $V$ ,  $a$ ,  $b$ ,  $c$

Write down the equation for the surface area  $A$  of the rectangular cuboid in terms of  $a$ ,  $b$  and  $c$ .

The following symbols may be useful:  $A$ ,  $a$ ,  $b$ ,  $c$

From your equation for  $V$  deduce an expression for  $b$  in terms of  $V$ ,  $a$  and  $c$ . Hence, by substitution, obtain an equation for  $A$  in terms of  $V$ ,  $a$  and  $c$ .

The following symbols may be useful:  $A$ ,  $V$ ,  $a$ ,  $c$

**Part B****Expressions for  $a$  and  $b$** 

Differentiate with respect to  $a$  the expression for  $A$  you found in Part A (since  $V$  and  $c$  are fixed you may treat them as constants). Hence find in terms of  $V$  and  $c$  an expression for the value of  $a$  for which the surface area  $A$  is minimised.

The following symbols may be useful:  $v$ ,  $c$

Find, in terms of  $V$  and  $c$ , the expression for  $b$  corresponding to this value of  $a$ .

The following symbols may be useful:  $v$ ,  $c$

**Part C****The minimum area**

Find an expression for the minimum surface area in terms of  $V$  and  $c$ .

The following symbols may be useful:  $v$ ,  $c$

**Part D****Check that the area is a minimum**

Find, at the value of  $a$  deduced in Part B, an expression in terms of  $V$  and  $c$  for the second derivative of  $A$  with respect to  $a$ ; convince yourself that the value of the second derivative indicates that the value of  $A$  is a minimum at this point.

The following symbols may be useful:  $v$ ,  $c$
