

## Question

### Matrices: nxm Rules 2i

**Subject & topics:** Maths    **Stage & difficulty:** Further A P2

The matrices **A**, **B** and **C** are given by  $\mathbf{A} = \begin{pmatrix} 1 & -4 \end{pmatrix}$ ,  $\mathbf{B} = \begin{pmatrix} 5 \\ 3 \end{pmatrix}$  and  $\mathbf{C} = \begin{pmatrix} 3 & 0 \\ -2 & 2 \end{pmatrix}$

#### Part A

##### **AB**

Find the matrix **AB**

$$\left( \quad \right)$$

#### Part B

##### **BA – 4C**

Find the matrix given by **BA – 4C**.

$$\left( \quad \quad \quad \quad \right)$$

Adapted with permission from UCLES, A Level, June 2010, Paper 4725, Question 2.

## Question

### 2x2 Operations 2ii

**Subject & topics:** Maths    **Stage & difficulty:** Further A P1

The matrices  $\mathbf{A}$  and  $\mathbf{B}$  are given by  $\mathbf{A} = \begin{pmatrix} 2 & 1 \\ 3 & 2 \end{pmatrix}$  and  $\mathbf{B} = \begin{pmatrix} a & -1 \\ -3 & -2 \end{pmatrix}$ .

#### Part A

$a$

$a$  satisfies the equation  $2\mathbf{A} + \mathbf{B} = \begin{pmatrix} 1 & 1 \\ 3 & 2 \end{pmatrix}$ .

Find the value of  $a$ .

The following symbols may be useful: a

#### Part B

#### Alternate value of $a$

Now take  $a$  to satisfy the equation  $\mathbf{AB} = \begin{pmatrix} 7 & -4 \\ 9 & -7 \end{pmatrix}$ .

Find the value of  $a$ .

The following symbols may be useful: a

Adapted with permission from UCLES, A Level, June 2007, Paper 4725, Question 1.

## Question

### 2x2 Determinants and Inverses 1ii

**Subject & topics:** Maths    **Stage & difficulty:** Further A P1

The matrices  $\mathbf{A}$  and  $\mathbf{B}$  are given by  $\mathbf{A} = \begin{pmatrix} 2 & 1 \\ -4 & 5 \end{pmatrix}$  and  $\mathbf{B} = \begin{pmatrix} 3 & 1 \\ 2 & 3 \end{pmatrix}$ .  $\mathbf{I}$  denotes the  $2 \times 2$  identity matrix.

**Part A**

$$4\mathbf{A} - \mathbf{B} + 2\mathbf{I}$$

Find the matrix given by  $4\mathbf{A} - \mathbf{B} + 2\mathbf{I}$ .

$$\left( \begin{array}{cc} \boxed{\phantom{00}} & \boxed{\phantom{00}} \\ \boxed{\phantom{00}} & \boxed{\phantom{00}} \end{array} \right)$$

**Part B**

$$\mathbf{A}^{-1}$$

Find  $\mathbf{A}^{-1}$ .

$$\mathbf{A}^{-1} = \frac{1}{\boxed{\phantom{00}}} \begin{pmatrix} \boxed{\phantom{00}} & \boxed{\phantom{00}} \\ \boxed{\phantom{00}} & \boxed{\phantom{00}} \end{pmatrix}$$

You work it out.

## Question

### 3 Simultaneous Equations 3i

**Subject & topics:** Maths    **Stage & difficulty:** Further A P2

---

The matrix  $\mathbf{B}$  is given by  $\mathbf{B} = \begin{pmatrix} a & 1 & 3 \\ 2 & 1 & -1 \\ 0 & 1 & 2 \end{pmatrix}$ .

#### Part A

*a*

Find the value of  $a$  in exact form, given that  $\mathbf{B}$  is singular.

The following symbols may be useful: a

**Part B**  
 **$\mathbf{B}^{-1}$** 

Given that  $\mathbf{B}$  is non-singular, find  $\mathbf{B}^{-1}$ .

$$\mathbf{B}^{-1} = \frac{1}{\boxed{\quad}} \begin{pmatrix} \boxed{\quad} & \boxed{\quad} & \boxed{\quad} \\ \boxed{\quad} & \boxed{\quad} & \boxed{\quad} \\ \boxed{\quad} & \boxed{\quad} & \boxed{\quad} \end{pmatrix}$$

Items:

- 4    -3    -2    -1    0    1    2    3    4    a    -a    2a    -2a    3a    -3a    a + 2    a - 2    a + 4    a - 4  
 a + 6    a - 6    2a + 2    2a - 2    3a + 2    3a - 2

**Part C**
**Simultaneous equations**

$x, y$  and  $z$  satisfy the following simultaneous equations

$$\begin{aligned} -x + y + 3z &= 1 \\ 2x + y - z &= 4 \\ y + 2z &= -1 \end{aligned}$$

Use matrix methods to find  $x, y$  and  $z$ .

$$(\boxed{\quad}, \boxed{\quad}, \boxed{\quad})$$

## Question

### Matrices - Intersecting Lines

**Subject & topics:** Maths | Algebra | Matrices

**Stage & difficulty:** Further A P3, University P2

Two lines are described by

$$\begin{aligned} 3x - 4y - 1 &= 0 \\ 2x + py - 10 &= 0. \end{aligned}$$

where  $p$  is a constant. Use matrix notation to find the coordinates of the point of intersection of these two lines.

#### Part A

#### Write in matrix form

Write these equations in matrix form  $\mathbf{Ax} = \mathbf{b}$ .

$$\left( \begin{array}{cc} \boxed{\phantom{00}} & \boxed{\phantom{00}} \\ \boxed{\phantom{00}} & \boxed{\phantom{00}} \end{array} \right) \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} \boxed{\phantom{00}} \\ \boxed{\phantom{00}} \end{pmatrix}$$

#### Part B

#### Condition for no intersection

Use the matrix to find the value of  $p$  for which the lines do not intersect. Give your answer as an improper fraction.

The following symbols may be useful:  $\rho$

**Part C****The inverse matrix**

Find  $\mathbf{A}^{-1}$ , the inverse of  $\mathbf{A}$ .

$$\mathbf{A}^{-1} = \frac{1}{\boxed{\phantom{00}}} \begin{pmatrix} \boxed{\phantom{00}} & \boxed{\phantom{00}} \\ \boxed{\phantom{00}} & \boxed{\phantom{00}} \end{pmatrix}$$

Items:

- 4    -3    -2    -1    0    1    2    3    4    p    -p    p + 4    p - 4    p + 8    p - 8    3p + 4    3p - 4  
 3p + 8    3p - 8

**Part D****Components of point of intersection**

Using  $\mathbf{A}^{-1}$  find the the point of intersection in terms of  $p$ .

$$\left( \begin{array}{c} \boxed{\phantom{00}} \\ \hline \boxed{\phantom{00}} \end{array}, \begin{array}{c} \boxed{\phantom{00}} \\ \hline \boxed{\phantom{00}} \end{array} \right)$$

Items:

- 18    20    28    30    38    40    p + 4    p + 8    p + 40    p + 80    3p + 4    3p + 8    3p + 40    3p + 80

**Part E****A value for  $p$** 

If the  $y$ -component of the point of intersection is equal to 2, find the value of  $p$ .

## Question

### Matrices - Linear Equations 2

**Subject & topics:** Maths | Algebra | Matrices

**Stage & difficulty:** Further A P3, University P2

Use matrix notation to solve the following set of three equations for  $x$ ,  $y$  and  $z$ :

$$\begin{aligned}x + cy &= c \\x - y + 2z &= -c \\2x - 2y - z &= 2.\end{aligned}$$

#### Part A

##### Write in matrix form

Write these equations in matrix form  $\mathbf{R}\mathbf{x} = \mathbf{p}$ .

$$\left( \begin{array}{ccc} \boxed{\phantom{000}} & \boxed{\phantom{000}} & \boxed{\phantom{000}} \\ \boxed{\phantom{000}} & \boxed{\phantom{000}} & \boxed{\phantom{000}} \\ \boxed{\phantom{000}} & \boxed{\phantom{000}} & \boxed{\phantom{000}} \end{array} \right) \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} \boxed{\phantom{000}} \\ \boxed{\phantom{000}} \\ \boxed{\phantom{000}} \end{pmatrix}$$

#### Part B

##### Determinant of the matrix

Find the determinant of  $\mathbf{R}$  in terms of  $c$ .

The following symbols may be useful:  $c$

**Part C****Condition for no unique solution**

Deduce the value of  $c$  for which there is no unique solution.

**Part D****The inverse matrix**

Find the inverse matrix  $\mathbf{R}^{-1}$ .

$$\mathbf{R}^{-1} = \frac{1}{\boxed{\phantom{00}}} \begin{pmatrix} \boxed{\phantom{0}} & \boxed{\phantom{0}} & \boxed{\phantom{0}} \\ \boxed{\phantom{0}} & \boxed{\phantom{0}} & \boxed{\phantom{0}} \\ \boxed{\phantom{0}} & \boxed{\phantom{0}} & \boxed{\phantom{0}} \end{pmatrix}$$

- 5c - 5

**Part E****Solution to the set of equations if  $c = 1$** 

Using  $\mathbf{R}^{-1}$ , find the solutions for  $x$ ,  $y$  and  $z$  if  $c = 1$ .

$$(\boxed{\phantom{00}}, \boxed{\phantom{00}}, \boxed{\phantom{00}})$$

**STEM SMART Double Maths 9 - Matrices**

## Question

### Matrices - Linear Equations 3

**Subject & topics:** Maths | Algebra | Matrices    **Stage & difficulty:** Further A C1, University P2

---

A system consists of three masses  $m_1$ ,  $m_2$  and  $m_3$  in a line; they each have the same mass  $m$ . The mass  $m_2$  is in the centre and connected by springs of spring constant  $k$  to  $m_1$  on the left and  $m_3$  on the right. The masses are all performing simple harmonic motion at the same angular frequency  $\omega$  such that their equations of motion are

$$\begin{aligned} -kx_1 + kx_2 &= -m\omega^2 x_1 \\ kx_1 - 2kx_2 + kx_3 &= -m\omega^2 x_2 \\ kx_2 - kx_3 &= -m\omega^2 x_3. \end{aligned}$$

where  $x_1$ ,  $x_2$  and  $x_3$  are the displacements of  $m_1$ ,  $m_2$  and  $m_3$  respectively.

These equations can be written in matrix form

$$\begin{aligned} \mathbf{Ax} &= -m\omega^2 \mathbf{x} \\ &= -m\omega^2 \mathbf{Ix} \\ \Rightarrow (\mathbf{A} + m\omega^2 \mathbf{I})\mathbf{x} &= 0 \end{aligned}$$

A matrix equation of this sort only has solutions if  $|\mathbf{A} + m\omega^2 \mathbf{I}| = 0$ . Use this to find the possible values of  $\omega^2$ . For each value of  $\omega$  find the relationship between  $x_1$ ,  $x_2$  and  $x_3$ .

**Part A****The matrix  $\mathbf{A}$** 

Find the matrix  $\mathbf{A}$ .

$$\mathbf{A} = \begin{pmatrix} \boxed{\phantom{-}} & \boxed{\phantom{-}} & \boxed{\phantom{-}} \\ \boxed{\phantom{-}} & \boxed{\phantom{-}} & \boxed{\phantom{-}} \\ \boxed{\phantom{-}} & \boxed{\phantom{-}} & \boxed{\phantom{-}} \end{pmatrix}$$

Items:

- 2**    **-1**    **0**    **1**    **2**     **$-3k$**      **$-2k$**      **$-k$**      **$k$**      **$2k$**      **$3k$**

**Part B****The matrix  $\mathbf{A} + m\omega^2 \mathbf{I}$** 

Find the matrix  $\mathbf{A} + m\omega^2 \mathbf{I}$ .

$$\mathbf{A} + m\omega^2 \mathbf{I} = \begin{pmatrix} \boxed{\phantom{-}} & \boxed{\phantom{-}} & \boxed{\phantom{-}} \\ \boxed{\phantom{-}} & \boxed{\phantom{-}} & \boxed{\phantom{-}} \\ \boxed{\phantom{-}} & \boxed{\phantom{-}} & \boxed{\phantom{-}} \end{pmatrix}$$

Items:

- 1**    **0**    **1**     **$-2k$**      **$-k$**      **$k$**      **$2k$**      **$m\omega^2 - 2k$**      **$m\omega^2 - k$**      **$m\omega^2 + k$**      **$m\omega^2 + 2k$**

**Part C****The possible values of  $\omega^2$** 

Using the fact that non-zero solutions to the equation  $(\mathbf{A} + m\omega^2 \mathbf{I})\mathbf{x} = 0$  require that  $|\mathbf{A} + m\omega^2 \mathbf{I}| = 0$ , deduce the three values of  $\omega^2$ . The three values,  $\omega_1^2$ ,  $\omega_2^2$  and  $\omega_3^2$ , are such that  $\omega_1^2 < \omega_2^2 < \omega_3^2$ .

$$\omega_1^2 = \boxed{\phantom{000}}, \omega_2^2 = \boxed{\phantom{000}} \text{ and } \omega_3^2 = \boxed{\phantom{000}}$$

**Part D****The relationship between  $x_1$ ,  $x_2$  and  $x_3$** 

Since the determinant of the matrix is zero there are no unique solutions to the set of three equations; however, for each value of  $\omega^2$ ,  $x_1$ ,  $x_2$  and  $x_3$  have a fixed relationship to each other. On the assumption that  $x_1 = 1$ , find  $x_2$  and  $x_3$  for each of the three frequencies deduced in Part B.

$$\begin{aligned} & ( \boxed{\phantom{000}}, \boxed{\phantom{000}}, \boxed{\phantom{000}} ) \\ & ( \boxed{\phantom{000}}, \boxed{\phantom{000}}, \boxed{\phantom{000}} ) \\ & ( \boxed{\phantom{000}}, \boxed{\phantom{000}}, \boxed{\phantom{000}} ) \end{aligned}$$
